CONTENTS

Preface v

List of symbols vii

Chapter 1. **Structure and basic properties of shock waves in gases** 1

1. General remarks 1
2. Interaction of shock waves 7
3. Shock tube as an apparatus for obtaining shock waves in the laboratory 20

Chapter 2. **Shock wave propagation through a gas** 41

4. Basic notions 41
5. Compatibility conditions 44
6. Ray method for calculation of unsteady shock waves 55
7. Path of a particle behind a shock wave 74
8. Distribution of flow parameters behind an unsteady curvilinear shock wave 76

Chapter 3. **Interaction of a plane shock wave with disturbances and stability of shock waves** 79

9. Linear interaction of shock waves with disturbances 79
10. Propagation of a plane shock wave through a region of nonuniform density (nonlinear case) 84
11. Nonlinear one-dimensional interaction of a weak disturbance with a shock wave 90
12. Instability of shock waves 96

Chapter 4. **Reflection of a shock wave from a convex body** 105

13. Reflection of a plane wave from a body of arbitrary shape 105
14. Transition from regular to Mach reflection 117
15. Development of flow over a blunt body behind an incident shock wave 120

Chapter 5. **Reflection of a shock wave from a concave body and shock focusing** **141**
16. Reflection of a shock wave from a body with rectangular cavity 141
17. Oscillations of the shock wave reflected from a body with cavity 151
18. Shock focusing 154
19. Resonant excitation of vortices behind the reflected shock wave 164
Chapter 6. **Propagation of a shock wave through a turbulent gas flow** **177**
Chapter 7. **Propagation of a shock wave through a gas-particle mixture** **191**
Chapter 8. **Laser-driven shock waves** **197**
Chapter 9. **Shock waves in a low-temperature plasma** **213**
Appendix A **225**
References **233**
Subject index **243**
