

# **An Introduction to Number Theory**

Harold M. Stark

**The MIT Press**  
**Cambridge, Massachusetts, and London, England**

## Contents

Preface	<u>v</u>
Chapter 1	<u>1</u>
An Introduction to Number Theory	
1.1	<u>1</u>
An Introduction to Number Theory	
1.2	<u>11</u>
Some Elementary Properties of Divisibility	
Chapter 2	<u>16</u>
The Euclidean Algorithm and Unique Factorization	
2.1	<u>16</u>
The Euclidean Algorithm	
2.2	<u>26</u>
The Fundamental Theorem of Arithmetic	
2.3	<u>33</u>
Applications of the Fundamental Theorem	
2.4	<u>36</u>
Multiplicative Functions	
2.5	<u>44</u>
Linear Diophantine Equations	
Chapter 3	<u>51</u>
Congruences	
3.1	<u>51</u>
Introduction	
3.2	<u>54</u>
Fundamental Properties of Congruences	
3.3	<u>66</u>
Linear Congruence Equations	

3.4	<u>77</u>
Reduced Residue Systems and Euler's $\phi$ Function	
3.5	<u>82</u>
More on Euler's $\phi$ Function	
3.6	<u>86</u>
Polynomial Congruences	
3.7	<u>97</u>
Primitive Roots	
Chapter 4	<u>118</u>
Magic Squares	
4.1	<u>118</u>
The Uniform Step Method	
4.2	<u>123</u>
Filled and Magic Squares	
4.3	<u>132</u>
Diabolic and Symmetric Squares	
4.4	<u>137</u>
Historical Comments	

Chapter 5	<u>145</u>
Diophantine Equations	
5.1	<u>145</u>
Introduction	
5.2	<u>148</u>
The Use of Congruences in Solving Diophantine Equations	
5.3	<u>151</u>
Pythagorean Triples	
5.4	<u>155</u>
Fermat's Method of Descent	
Chapter 6	<u>164</u>
Numbers, Rational and Irrational	
6.1	<u>164</u>
Rational Numbers	
6.2	<u>170</u>
Irrational Numbers	
6.3	<u>172</u>
Liouville's Theorem and Transcendental Numbers	
Chapter 7	<u>181</u>
Continued Fractions from a Geometric Viewpoint	
7.1	<u>181</u>
Introduction	
7.2	<u>185</u>
The Continued Fraction Algorithm	
7.3	<u>196</u>
Computation of $a_n$	
7.4	<u>209</u>
The Best Approximations	
7.5	<u>223</u>
A Commentary of Proof by Picture	

7.6	226
Periodic Continued Fractions	
7.7	239
The Fermat-Pell Equation and the Continued Fraction Expansion of $\sqrt{d}$	
Chapter 8	257
Quadratic Fields	
8.1	257
Introduction	
8.2	258
Quadratic Fields and Quadratic Integers	
8.3	270
Divisibility and Factorization into Primes	
8.4	281
Unique Factorization and Euclidean Domains	
8.5	299
Applications of Quadratic Fields to Diophantine Equations	
8.6	305
Historical Comments	
Appendix A	317
Two-Dimensional Vectors	
Appendix B	322
Two by Two Matrices	
Appendix C	331
Fields	
Bibliography	334
Answers to Selected Exercises	341
List of Symbols	344
Index	345
