Introduction 1

PART ONE: PROBABILITY IN ACTION 9

1 Probability questions 11

2 The law of large numbers and simulation 17
2.1 The law of large numbers for probabilities 18
2.2 Basic probability concepts 27
2.3 Expected value and the law of large numbers 32
2.4 The drunkard's walk 37
2.5 The St. Petersburg paradox 39
2.6 Roulette and the law of large numbers 41
2.7 The Kelly betting system 44
2.8 Random-number generator 50
2.9 Simulating from probability distributions 55
2.10 Problems 64

3 Probabilities in everyday life 73
3.1 The birthday problem 74
3.2 The coupon collector's problem 79
3.3 Craps 82
3.4 Gambling systems for roulette 86
3.5 The 1970 draft lottery 89
3.6 Bootstrap method 93
3.7 Problems 95

4 Rare events and lotteries 103
4.1 The binomial distribution 104
4.2 The Poisson distribution 108
4.3 The hypergeometric distribution 125
4.4 Problems 134

5 Probability and statistics 141
5.1 The normal curve 143
5.2 The concept of standard deviation 151
5.3 The square-root law 159
5.4 The central limit theorem 160
5.5 Graphical illustration of the central limit theorem 164
5.6 Statistical applications 166
5.7 Confidence intervals for simulations 170
5.8 The central limit theorem and random walks 177
5.9 Falsified data and Benford's law 191
5.10 The normal distribution strikes again 196
5.11 Statistics and probability theory 197
5.12 Problems 200

6 Chance trees and Bayes' rule 206
6.1 The Monty Hall dilemma 207
6.2 The test paradox 212
6.3 Problems 217

PART TWO: ESSENTIALS OF PROBABILITY 221

7 Foundations of probability theory 223
7.1 Probabilistic foundations 223
7.2 Compound chance experiments 231
7.3 Some basic rules 235

8 Conditional probability and Bayes 243
8.1 Conditional probability 243
8.2 Bayes' rule in odds form 251
8.3 Bayesian statistics 256

9 Basic rules for discrete random variables 263
9.1 Random variables 263

9.2 Expected value 264
9.3 Expected value of sums of random variables 268
9.4 Substitution rule and variance 270
9.5 Independence of random variables 275
9.6 Special discrete distributions 279

10 Continuous random variables 284
10.1 Concept of probability density 285
10.2 Important probability densities 296
10.3 Transformation of random variables 308
10.4 Failure rate function 310

11 Jointly distributed random variables 313
11.1 Joint probability densities 313
11.2 Marginal probability densities 319
11.3 Transformation of random variables 323
11.4 Covariance and correlation coefficient 327

12 Multivariate normal distribution 331
12.1 Bivariate normal distribution 331
12.2 Multivariate normal distribution 339
12.3 Multidimensional central limit theorem 342
12.4 The chi-square test 348

13 Conditional distributions 352
13.1 Conditional probability densities 352
13.2 Law of conditional probabilities 356
13.3 Law of conditional expectations 361

14 Generating functions 367
14.1 Generating functions 367
14.2 Moment-generating functions 374

15 Markov chains 385
15.1 Markov model 386
15.2 Transient analysis of Markov chains 394
15.3 Absorbing Markov chains 398
15.4 Long-run analysis of Markov chains 404

Appendix Counting methods and e^x 415
Recommended reading 421
Answers to odd-numbered problems 422
Bibliography 437
Index 439
