Dedication v

Preface xi

1. REPRESENTATION THEOREMS 1

1.1 Theorems on representation at a point 1

1.2 Integral operators. Convergence in L_p-norm and almost everywhere 5

1.3 Multidimensional case 16

1.4 Further problems and theorems 20

1.5 Comments to Chapter 1 24

2. FOURIER SERIES 25

2.1 Convergence and divergence 25

2.2 Two classical summability methods 34

2.3 Harmonic functions and functions analytic in the disk 42

2.4 Multidimensional case 50

2.5 Further problems and theorems 59

2.6 Comments to Chapter 2 66

3. FOURIER INTEGRAL 67

3.1 L-Theory 67

3.2 L_2-Theory 75

3.3 Multidimensional case 80

3.4 Entire functions of exponential type. The Paley-Wiener theorem 88

3.5 Further problems and theorems 95

3.6 Comments to Chapter 3 104

4. DISCRETIZATION. DIRECT AND INVERSE THEOREMS 105
4.1 Summation formulas of Poisson and Euler-Maclaurin 106
4.2 Entire functions of exponential type and polynomials 113
4.3 Network norms. Inequalities of different metrics 125
4.4 Direct theorems of Approximation Theory 132
4.5 Inverse theorems. Constructive characteristics. Embedding theorems 138
4.6 Moduli of smoothness 144
4.7 Approximation on an interval 169
4.8 Further problems and theorems 189
4.9 Comments to Chapter 4 196

5. EXTREMAL PROBLEMS OF APPROXIMATION THEORY 201
5.1 Best approximation 201
5.2 The space L_p. Best approximation 205
5.3 Space C. The Chebyshev alternation 212
5.4 Extremal properties for algebraic polynomials and splines 218
5.5 Best approximation of a set by another set 234
5.6 Further problems and theorems 245
5.7 Comments to Chapter 5 252

6. A FUNCTION AS THE FOURIER TRANSFORM OF A MEASURE 255
6.1 Algebras A and B. The Wiener Tauberian theorem 256
6.2 Positive definite and completely monotone functions 264
6.3 Positive definite functions depending only on a norm 278
6.4 Sufficient conditions for belonging to A_p and A^* 288
6.5 Further problems and theorems 304
6.6 Comments to Chapter 6 307

7. FOURIER MULTIPLIERS 309
7.1 General properties 309
7.2 Sufficient conditions 321
7.3 Multipliers of power series in the Hardy spaces 329
7.4 Multipliers and comparison of summability methods of orthogonal series 337
7.5 Further problems and theorems 345

7.6 Comments to Chapter 7 347

8. SUMMABILITY METHODS. MODULI OF SMOOTHNESS 349
8.1 Regularity 349
8.2 Applications of comparison. Two-sided estimates 358
8.3 Moduli of smoothness and K-functionals 368
8.4 Moduli of smoothness and strong summability in $H_p(D)$, $0 < p \leq 1$ 375
8.5 Further problems and theorems 385
8.6 Comments to Chapter 8 389

9. LEBESGUE CONSTANTS AND APPROXIMATION 393
9.1 Upper and lower estimates 394
9.2 Examples of Lebesgue constants in the multiple case 404
9.3 Asymptotics of Lebesgue constants and approximation 410
9.4 Further problems and theorems 423
9.5 Comments to Chapter 9 427

10. WIDTHS. POLYNOMIAL APPROXIMATION 429
10.1 Entropy numbers 429
10.2 Polynomials with free spectrum. Trigonometric widths 438
10.3 Kolmogorov widths 450
10.4 Further problems and theorems 469
10.5 Comments to Chapter 10 475

11. FUNCTIONS WITH BOUNDED MIXED DERIVATIVE 477
11.1 Hyperbolic cross polynomials 477
11.2 Estimates of entropy numbers 486
11.3 Widths 499
11.4 Further problems and theorems 506
11.5 Comments to Chapter 11 509

Appendices 511
A Prerequisites 511
A.1 Weierstrass approximation theorems 511
A.2 The modulus of continuity of a function 512
A.3 The Riemann-Stieltjes integral 513
A.4 Summability of series 514

A.5 Analytic functions 516
A.6 Measure and integral. Complex-valued measures 519
A.7 Hilbert spaces. Classical orthonormal systems 525
A.8 Banach spaces and linear operators 531
A.9 Fourier multipliers 534
A.10 Several classical theorems 536
A.11 Polynomials with integral coefficients 537
A.12 Some inequalities 537
B Principal symbols 541
B.1 $\mathbb{R}^m$ and its subsets 541
B.2 Functional notations 541
