### Library of Congress Cataloging-in-Publication Data

Vasil'ev, V. A., 1956–

Applied Picard-Lefschetz theory / V. A. Vassiliev.

p. cm. — (Mathematical surveys and monographs, ISSN 0076-5376 ; v. 97)

Includes bibliographical references and index.

ISBN 0-8218-2948-3 (alk. paper)

1. Picard-Lefschetz theory. 2. Singularities (Mathematics) 3. Integral representations.  
I. Title. II. Mathematical surveys and monographs ; no. 97.

QA564.V37 2002

# Contents

PREFACE	ix
INTRODUCTION	1
1. Monodromy and its localization	1
2. Newton's problem on the integrability of ovals	6
3. Surface potentials	13
4. Petrovskii theory of lacunas for hyperbolic operators	18
5. Hypergeometric integrals	22
Chapter I. LOCAL MONODROMY THEORY OF ISOLATED SINGULARITIES OF FUNCTIONS AND COMPLETE INTERSECTIONS	29
1. Gauß–Manin connection in homological bundles. Monodromy and variation operators	29
2. Picard–Lefschetz formula	32
3. Monodromy theory of isolated function singularities	37
4. Dynkin diagrams of real singularities of functions of two variables (after S.M. Gusein-Zade and N. A'Campo)	51
5. Classification of singularities of smooth functions	56
6. Lyashko–Looijenga covering	62
7. Complements of discriminants of real simple singularities (after E. Looijenga)	65
8. Pham singularities	67
9. Singularities and local monodromy of complete intersections	71
Chapter II. STRATIFIED PICARD–LEFSCHETZ THEORY AND MONODROMY OF HYPERPLANE SECTIONS	75
1. Stratifications of semianalytic and subanalytic sets	76
2. Monodromy of hyperplane sections	79
3. Simplest facts on intersection homology theory	89
4. Stratified Picard–Lefschetz theory	91
Chapter III. NEWTON'S THEOREM ON THE NON-INTEGRABILITY OF OVALS	111
1. Introduction	111
2. Reduction to monodromy theory	117
3. The class “cap”	119
4. Ramification of integration chains at non-singular points	121
5. Examples	124

6. Obstructions to integrability arising from cuspidal edges. Proof of Theorem 1.8	126
7. Ramification close to asymptotic hyperplanes. Proof of Theorem 1.9	133
8. Open problems	136
Chapter IV. LACUNAS AND LOCAL PETROVSKIĬ CONDITION FOR HYPERBOLIC DIFFERENTIAL OPERATORS WITH CONSTANT COEFFICIENTS	
	137
1. Introduction	137
2. Hyperbolic polynomials	140
3. Hyperbolic operators and hyperbolic polynomials. Sharpness, diffusion, and lacunas	142
4. Generating functions and generating families of wave fronts. Classification of singular points of wave fronts	146
5. Local lacunas close to non-singular points of fronts and close to singular points of types $A_2$ and $A_3$ (after Davydova, Borovikov and Gårding)	149
6. Petrovskiĭ and Leray cycles. Herglotz–Petrovskiĭ–Leray formula. Petrovskiĭ condition for global lacunas	151
7. Local Petrovskiĭ condition and local Petrovskiĭ cycle. Local Petrovskiĭ condition implies sharpness	155
8. Sharpness implies the local Petrovskiĭ condition close to the finite type points of wave fronts	159
9. Local Petrovskiĭ condition can be stronger than sharpness	162
10. Normal forms of non-sharpness at the singularities of wave fronts (after A.N. Varchenko)	162
11. Problems	164
Chapter V. CALCULATION OF LOCAL PETROVSKIĬ CYCLES AND ENUMERATION OF LOCAL LACUNAS CLOSE TO REAL SINGULARITIES	
	165
1. Main theorems	165
2. Local lacunas close to table singularities	174
3. Calculation of the even local Petrovskiĭ class	182
4. Calculation of the odd local Petrovskiĭ class	187
5. Stabilization of local Petrovskiĭ classes	191
6. Local lacunas close to simple singularities	192
7. Geometric characterization of local lacunas at simple singularities	207
8. A program enumerating topologically distinct morsifications of real function singularities	209
Chapter VI. HOMOLOGY OF LOCAL SYSTEMS, TWISTED MONODROMY THEORY, AND REGULARIZATION OF IMPROPER INTEGRATION CYCLES	
	215
1. Local systems and their homology groups	215
2. Twisted vanishing homology of functions and complete intersections	218
3. Regularization of non-compact cycles	224
4. The “double loop” cycle	226
5. Monodromy of twisted vanishing homology for Pham singularities	234

6. Stratified Picard–Lefschetz theory with twisted coefficients	240
Chapter VII. ANALYTIC PROPERTIES OF SURFACE POTENTIALS	251
1. Introduction	251
2. Theorems of Newton and Ivory	254
3. Hyperbolic potentials are regular in the hyperbolicity domain (after V.I. Arnold and A.B. Givental)	256
4. Reduction to monodromy theory	260
5. Ramification of potentials and monodromy of complete intersections	265
6. Examples: curves, quadrics, and Ivory’s second theorem	272
7. Description of the small monodromy group	274
8. Proof of Theorem 1.4	283
9. Proof of Theorem 1.3	284
Chapter VIII. MULTIDIMENSIONAL HYPERGEOMETRIC FUNCTIONS, THEIR RAMIFICATION, SINGULARITIES, AND RESONANCES	287
1. Introduction	287
2. Proof of the meromorphy theorem	291
3. The hypergeometric function and its one-dimensional generalizations	295
4. Homology of complements of plane arrangements. Basic strata	297
5. The number of independent hypergeometric integrals on basic strata	305
Bibliography	313
Index	321
