Contents

Introduction	vii
Organization of the text	xviii
Acknowledgment	xviii
Note added in Translation	xix
Chapter 1. Calabi–Yau Manifolds	1
1. Yau’s Theorem	1
2. The decomposition theorem	3
3. Smoothness of the local family of deformations	5
4. Smoothability of Calabi–Yau manifolds with normal crossings	8
5. The period map	10
6. Calabi–Yau threefolds	14
7. Examples of Calabi–Yau manifolds	15
8. Mirrors	17
Chapter 2. “Physical” origin of the conjecture	21
1. The $N = 2$ -supersymmetric σ -model	21
2. Quantification	27
3. Gepner’s conjecture	31
4. Mirror symmetry	32
5. The $N = 2$ -superconformal theory and Dolbeault cohomology	33
6. Witten’s interpretation	35
Chapter 3. The Work of Candelas–de la Ossa–Green–Parkes	39
1. Special coordinates and Yukawa couplings	39
2. Degenerations	43
3. The Candelas–de la Ossa–Green–Parkes calculation	48
4. Picard–Fuchs equations	50
5. Conclusion of the argument	54
Chapter 4. The work of Batyrev	57
1. Toric varieties	57
2. Weil and Cartier divisors	59
3. Polyhedra and toric varieties	60
4. Toric Fano varieties	62
5. Desingularization	63
6. Calculation of the cohomology of \widehat{Z}_f	65
Chapter 5. Quantum cohomology	73
1. The formulation by Kontsevich and Manin	73

2. The work of Ruan and Tian	76
3. Gromov–Witten potential	81
4. Application to mirror symmetry	87
5. Quantum product	88
6. The calculation of Aspinwall and Morrison	89
Chapter 6. The Givental Construction	95
1. Floer Cohomology	95
2. The comparison theorem	101
3. Quantum cohomology and Floer cohomology	102
4. Equivariant cohomology	105
5. The Givental construction	110
Bibliography	117
