

Arthur T. Winfree

The Geometry of Biological Time

Second Edition

With 336 Illustrations

Springer

Contents

Preface to the 2000 Edition	vii
Preface to the 1980 Edition	xiii
Introduction	xxiii
1. Circular Logic	1
A: Spaces	1
B: Mappings	4
C: Phase Singularities of Maps	24
D: Technical Details on Application to Biological Rhythms	30
2. Phase Singularities (Screwy Results of Circular Logic)	41
A: Examples	42
B: Counterexamples	75
C: The Word “Singularity”	77
3. The Rules of the Ring	80
A: Basic Principles, Paradigms, Language Conventions, and Epistemology	80
B: Dynamics on the Ring	83
C: Derivation of Phase-Resetting Curves	88
D: Historical Appendix	97
4. Ring Populations	101
A: Collective Rhythmicity in a Population of Independent Simple Clocks	101
B: Communities of Clocks	119
C: Spatially Distributed Independent Simple Clocks	134
D: Ring Devices Interacting Locally	138

5. Getting off the Ring	146
A: Enumerating Dimensions	146
B: Deducing the Topology	147
C: The Simplest Models	149
D: Mathematical Redescription	151
E: Graphical Interpretation	155
F: Summary	159
6. Attracting Cycles and Isochrons	161
A: Unperturbed Dynamics	161
B: Perturbing an Attracting-Cycle Oscillator	177
C: Unsmooth Kinetics	188
7. Measuring the Trajectories of a Circadian Clock	198
A: Introduction	198
B: The Time Machine Experiment	200
C: Unperturbed Dynamics	206
D: The Impact of Light	213
E: Deriving the Pinwheel Experiment	216
F: So What?	220
G: In Conclusion	228
8. Populations of Attracting-Cycle Oscillators	229
A: Collective Rhythmicity in a Population of Independent Oscillators: How Many Oscillators?	230
B: Collective Rhythmicity in a Community of Attracting-Cycle Oscillators	231
C: Spatially Distributed Independent Oscillators	236
D: Attracting-Cycle Oscillators Interacting Locally in Two-Dimensional Space	250
9. Excitable Kinetics and Excitable Media	258
A: Excitability	258
B: Rotors	264
C: Three-Dimensional Rotors	291
10. The Varieties of Phaseless Experience: In which the Geometrical Orderliness of Rhythmic Organization Breaks Down in Diverse Ways	303
A: The Physical Nature of Diverse States of Ambiguous Phase	304
B: The Singularities of Unsmooth Cycles	333
C: Transition to Bestiary	336

11. The Firefly Machine	338
A: Mechanics	338
B: Results	341
C: Historical	344
12. Energy Metabolism in Cells	347
A: Oscillators	347
B: The Dynamics of Anaerobic Sugar Metabolism	348
C: The Pasteur Effect	350
D: Goldbeter's PFK Kinetics	351
E: Phase Control by ADP	353
F: More Phase-Resetting Experiments	354
G: Results: The Time Crystal	355
H: A Repeat Using Divalent Cations	359
I: A Repeat Using Acetaldehyde	360
J: Phase Compromise Experiments	366
13. The Malonic Acid Reagent ("Sodium Geometrate")	368
A: Mechanism of the Reaction	371
B: Wave Phenomena	377
C: Excitation in Nonoscillating Medium	382
D: Wave Patterns in Two- and Three-Dimensional Context	383
E: Pacemakers	406
14. Electrical Rhythmicity and Excitability in Cell Membranes	411
A: Rephasing Schedules of Pacemaker Neurons	413
B: Mutual Synchronization	422
C: Waves in One Dimension	428
D: Rotating Waves in Two Dimensions	432
15. The Aggregation of Slime Mold Amoebae	443
A: The Life Cycle of a Social Amoeba	443
B: Questions of Continuity	446
C: Cell Chemistry and Cell-Cell Coupling	449
D: Phase Resetting by a cAMP Pulse	451
E: Historical Note	453
16. Numerical Organizing Centers	455
A: Scroll Filaments in Two Dimensions	456
B: Scroll Rings Shrink and Drift	467
C: Linked and Knotted Ring Anatomy	469

D: Linked and Knotted Ring Dynamics	472
E: Efforts to Analytically Derive and Numerically Confirm the Laws of Filament Dynamics	474
F: The Discovery of Persistent Ring Configurations	483
G: For the Future	490
H: Transition to Chapter 17 About Heart Muscle	492
17. Electrical Singular Filaments in the Heart Wall	495
A: Rotors in a Field of Coupled Oscillators	498
B: The Pinwheel Experiment	505
C: Pinwheel Experiment Revisited (PER)	518
D: Two- vs. Three-dimensional Instabilities of the Singular Filament in Heart Muscle	525
E: A Quick Summary of the April 1997 Experiments	532
F: What's Next?	533
18. Pattern Formation in the Fungi	537
A: Breadmold with a Circadian Clock	538
B: Breadmolds in Two-Dimensional Growth	539
C: Pattern Polymorphism in Bourret's <i>Nectria</i>	540
D: Integration of Pattern	543
19. Circadian Rhythms in General	545
A: Some Characteristics of Circadian Rhythms	561
B: Clock Evolution	576
C: The Multioscillator View of Circadian Rhythms	585
20. The Circadian Clocks of Insect Eclosion	592
A: Basics of Insect Eclosion Clocks	592
B: Phase and Amplitude Resetting in <i>Drosophila Pseudoobscura</i>	606
C: Other <i>Diptera</i>	620
21. The Flower of <i>Kalanchoë</i>	624
A: Type 0 Resetting	624
B: Resetting Data at Many Stimulus Magnitudes	627
C: A Phase Singularity	630
D: Arrhythmicity Not an Artifact of Populations	630
E: Amplitude Resetting	631
22. The Cell Mitotic Cycle	632
A: Three Basic Concepts and Some Models	634
B: Regulation of Mitosis by the Circadian Clock	640

C: Further Developments in the Area of Circadian Rhythms, Applied Back to the Cell Cycle	642
D: <i>Physarum Polycephalum</i>	644
23. The Female Cycle	650
A: Women, Hormones, and Eggs	650
B: Statistics ("Am I Overdue?!")	653
C: Rephasing Schedules	655
D: The Question of Smoothness	657
E: Circadian Control of Ovulation	658
Index of Author Citations and Publications	661
Index of Subjects	761
