Image Analysis, Random Fields and Markov Chain Monte Carlo Methods

A Mathematical Introduction

Winkler, G.

2003, XVI, 387 p. With online files/update., Hardcover

ISBN: 978-3-540-44213-4

# Contents

<b>Introduction</b> .....	1
---------------------------	---

---

## **Part I. Bayesian Image Analysis: Introduction**

---

<b>1. The Bayesian Paradigm</b> .....	9
1.1 Warming up for Absolute Beginners .....	10
1.2 Images and Observations .....	14
1.3 Prior and Posterior Distributions .....	20
1.4 Bayes Estimators .....	24
<b>2. Cleaning Dirty Pictures</b> .....	29
2.1 Boundaries and Their Information Content .....	30
2.2 Towards Piecewise Smoothing .....	31
2.3 Filters, Smoothers, and Bayes Estimators .....	41
2.4 Boundary Extraction .....	48
2.5 Dependence on Hyperparameters .....	50
<b>3. Finite Random Fields</b> .....	55
3.1 Markov Random Fields .....	55
3.2 Gibbs Fields and Potentials .....	60
3.3 Potentials Continued .....	66

---

## **Part II. The Gibbs Sampler and Simulated Annealing**

---

<b>4. Markov Chains: Limit Theorems</b> .....	75
4.1 Preliminaries .....	75
4.2 The Contraction Coefficient .....	81
4.3 Homogeneous Markov Chains .....	84
4.4 Exact Sampling .....	92
4.5 Inhomogeneous Markov Chains .....	102
4.6 A Law of Large Numbers for Inhomogeneous Chains .....	106
4.7 A Counterexample for the Law of Large Numbers .....	110

<b>5. Gibbsian Sampling and Annealing</b> .....	113
5.1 Sampling .....	113
5.2 Simulated Annealing .....	120
5.3 Discussion .....	125
<b>6. Cooling Schedules</b> .....	129
6.1 The ICM Algorithm .....	129
6.2 Exact MAP Estimation Versus Fast Cooling .....	131
6.3 Finite Time Annealing .....	139

---

### Part III. Variations of the Gibbs Sampler

---

<b>7. Gibbsian Sampling and Annealing Revisited</b> .....	143
7.1 A General Gibbs Sampler .....	143
7.2 Sampling and Annealing Under Constraints .....	147
<b>8. Partially Parallel Algorithms</b> .....	153
8.1 Synchronous Updating on Independent Sets .....	154
8.2 The Swendsen-Wang Algorithm .....	156
<b>9. Synchronous Algorithms</b> .....	159
9.1 Invariant Distributions and Convergence .....	159
9.2 Support of the Limit Distribution .....	163
9.3 Synchronous Algorithms and Reversibility .....	168

---

### Part IV. Metropolis Algorithms and Spectral Methods

---

<b>10. Metropolis Algorithms</b> .....	179
10.1 Metropolis Sampling and Annealing .....	179
10.2 Convergence Theorems .....	180
10.3 Best Constants .....	185
10.4 About Visiting Schemes .....	187
10.5 Generalizations and Modifications .....	191
10.6 The Metropolis Algorithm in Combinatorial Optimization ...	193
<b>11. The Spectral Gap and Convergence of Markov Chains</b> ...	197
11.1 Eigenvalues of Markov Kernels .....	197
11.2 Geometric Convergence Rates .....	201
<b>12. Eigenvalues, Sampling, Variance Reduction</b> .....	203
12.1 Samplers and Their Eigenvalues .....	203
12.2 Variance Reduction .....	204
12.3 Importance Sampling .....	206

**13. Continuous Time Processes** ..... 209  
 13.1 Discrete State Space ..... 210  
 13.2 Continuous State Space ..... 211

---

**Part V. Texture Analysis**

---

**14. Partitioning** ..... 217  
 14.1 How to Tell Textures Apart ..... 217  
 14.2 Bayesian Texture Segmentation ..... 221  
 14.3 Segmentation by a Boundary Model ..... 223  
 14.4 Julesz’s Conjecture and Two Point Processes ..... 225

**15. Random Fields and Texture Models** ..... 231  
 15.1 Neighbourhood Relations ..... 233  
 15.2 Random Field Texture Models ..... 235  
 15.3 Texture Synthesis ..... 240

**16. Bayesian Texture Classification** ..... 243  
 16.1 Contextual Classification ..... 244  
 16.2 Marginal Posterior Modes Methods ..... 246

---

**Part VI. Parameter Estimation**

---

**17. Maximum Likelihood Estimation** ..... 251  
 17.1 The Likelihood Function ..... 252  
 17.2 Objective Functions ..... 257

**18. Consistency of Spatial ML Estimators** ..... 263  
 18.1 Observation Windows and Specifications ..... 263  
 18.2 Pseudolikelihood Methods ..... 268  
 18.3 Large Deviations and Full Maximum Likelihood ..... 277  
 18.4 Partially Observed Data ..... 279

**19. Computation of Full ML Estimators** ..... 281  
 19.1 A Naive Algorithm ..... 281  
 19.2 Stochastic Optimization for the Full Likelihood ..... 285  
 19.3 Main Results ..... 286  
 19.4 Error Decomposition ..... 291  
 19.5  $L^2$ -Estimates ..... 295

---

**Part VII. Supplement**

---

<b>20. A Glance at Neural Networks</b> .....	301
20.1 Boltzmann Machines .....	302
20.2 A Learning Rule .....	306
<b>21. Three Applications</b> .....	313
21.1 Motion Analysis .....	313
21.2 Tomographic Image Reconstruction .....	317
21.3 Biological Shape .....	321

---

**Part VIII. Appendix**

---

<b>A. Simulation of Random Variables</b> .....	327
A.1 Pseudorandom Numbers .....	327
A.2 Discrete Random Variables .....	331
A.3 Special Distributions .....	334
<b>B. Analytical Tools</b> .....	343
B.1 Concave Functions .....	343
B.2 Convergence of Descent Algorithms .....	346
B.3 A Discrete Gronwall Lemma .....	347
B.4 A Gradient System .....	347
<b>C. Physical Imaging Systems</b> .....	351
<b>D. The Software Package AntsInFields</b> .....	355
<b>References</b> .....	357
<b>Symbols</b> .....	379
<b>Index</b> .....	381
