

CONTENTS

Preface	viii
Chapter I. The type problem	1
1. Basic facts	1
A. Pólya's walk	1
B. Irreducible Markov chains	2
C. Random walks on graphs	7
D. Trees	9
E. Random walks on finitely generated groups	10
F. Locally finite graphs and topological groups	12
2. Recurrence and transience of infinite networks	14
A. Reversible Markov chains	14
B. Flows, capacity, and Nash-Williams' criterion	18
C. Comparison with non-reversible Markov chains	23
3. Applications to random walks	25
A. Comparison theorems for random walks on graphs	25
B. Growth and the classification of recurrent groups	30
C. Random walks on quasi-transitive graphs	36
4. Isoperimetric inequalities	39
A. Isoperimetric and Sobolev inequalities	39
B. Cartesian products	43
C. Isoperimetric inequalities and growth	45
5. Transient subtrees, and the classification of the recurrent quasi-transitive graphs	49
A. Transient subtrees	49
B. Transient subtrees in quasi-transitive graphs	54
6. More on recurrence	56
A. Generalized lattices	56
B. More on trees	62
C. Extremal length and plane tilings	67
D. Circle packings and random walks	71
Notes and remarks	77
Chapter II. The spectral radius	81
7. Superharmonic functions and ρ -recurrence	81
A. The spectral radius and superharmonic functions	81
B. ρ -Recurrence	82
8. The spectral radius, the rate of escape, and generalized lattices	84

A.	The rate of escape	84
B.	Application to generalized lattices	88
9.	Computing the Green function	93
A.	Singularities of the Green function	93
B.	A functional equation	98
C.	Free products	101
10.	The spectral radius and strong isoperimetric inequalities	110
A.	The spectral radius of reversible Markov chains	110
B.	Application to random walks on graphs	112
C.	Examples: trees, strongly ramified graphs, and tilings	114
11.	A lower bound for simple random walks	118
12.	The spectral radius and amenability	123
A.	Amenable groups	123
B.	Automorphism groups and the spectral radius	125
C.	Some explicit computations	129
	Notes and remarks	136
Chapter III. The asymptotic behaviour of transition probabilities		
		139
13.	The local central limit theorem on the grid	139
14.	Growth, isoperimetric inequalities, and the asymptotic type of random walk	145
A.	Upper bounds and Nash inequalities	146
B.	Gaussian upper bounds	152
C.	Lower bounds	157
15.	The asymptotic type of random walks on amenable groups	160
A.	Comparison and stability of asymptotic type on groups	160
B.	Polycyclic groups	164
C.	The solvable Baumslag–Solitar groups	168
D.	Random walks on lamplighter groups	169
16.	Simple random walks on the Sierpiński graphs	171
A.	Stopping times and an equation for the Green function	172
B.	Singularity analysis	176
17.	Local limit theorems on free products	181
A.	The typical case: $n^{-3/2}$	183
B.	Instability of the exponent	189
18.	Intermezzo: Cartesian products	195

19. Free groups and homogeneous trees	199
A. Space-time asymptotics for aperiodic simple random walks on \mathbb{T}_M	199
B. Finite range random walks on free groups	205
C. Radial random walks on the homogeneous tree	213
Notes and remarks	216
Chapter IV. An introduction to topological boundary theory	220
20. A probabilistic approach to the Dirichlet problem, and a class of compactifications	220
A. The Dirichlet problem and convergence to the boundary	220
B. Compactifications with “hyperbolic” properties	224
21. Ends of graphs and the Dirichlet problem	230
A. The transitive case	232
B. Geometric adaptedness conditions	239
22. Hyperbolic graphs and groups	242
23. The Dirichlet problem for circle packing graphs	252
24. The construction of the Martin boundary	256
25. Generalized lattices, Abelian and nilpotent groups, and graphs with polynomial growth	262
A. Exponentials and extended exponentials	262
B. The Martin compactification of random walks on the grid	268
26. Trees, ends, and free products	275
A. Thin ends and trees	277
B. Free products	283
27. The Martin boundary of hyperbolic graphs	288
28. Cartesian products	297
A. Minimal harmonic functions on Cartesian products	297
B. The Martin compactification of $\mathbb{T} \times \mathbb{Z}$	301
Notes and remarks	309
Acknowledgments	315
Bibliography	316
