Contents

Preface vii

1 The structure of neural networks 1
1.1 The structure of a single neuron 1
1.2 Transmission of neural signals 2
1.3 Neural circuits, CNS and ANN 7

2 Dynamic models of networks 9
2.1 Biological models 9
2.2 Signal functions 14
2.3 General models and network architectures 16

3 Simple networks 24
3.1 Outstars: pattern learning 24
3.2 Instars: pattern recognition 30
3.3 Lateral inhibition: noise-saturation dilemma 34
3.4 Recurrent ON-CTR OFF-SUR networks: signal enhancement and noise suppression 36
3.5 Determining synaptic weights 50
Appendix. Grossberg's Learning Theorem 57

4 Content-addressable memory storage 61
4.1 Parallel memory storage by competitive networks 62
4.2 Convergence in networks with a nonsymmetric interconnection matrix 70
4.3 Implementation of CAM: Hopfield networks 75
4.4 Generic convergence in monotone networks 79

5 Signal transmission delays 88
5.1 Neural networks with delay and basic theory 90
5.2 Global stability analysis 95
5.3 Delay-induced instability 99
5.4 Hopf bifurcation of periodic solutions 105
5.5 A network of two neurons: McCulloch–Pitts nonlinearity 115
5.6 Delay-induced transient oscillations 138
5.7 Effect of delay on the basin of attraction 146

5.8 Synchronized activities 154
5.9 Desynchronization, phase-locked oscillation and connecting orbits . . 165

Bibliography 171
