

TRANSLATIONS OF MATHEMATICAL MONOGRAPHS

VOLUME 74

**The Linearization Method
in Hydrodynamical
Stability Theory**

V. I. YUDOVICH

American Mathematical Society · Providence · Rhode Island

Contents

Introduction	1
Chapter I. Estimates of solutions of the linearized Navier-Stokes equations	11
1. Estimates of integral operators in L_p	11
2. Some estimates of solutions of evolution equations	20
3. Estimates of the "leading derivatives" of solutions of evolution equations	32
4. Applications to parabolic equations and imbedding theorems	40
5. The linearized Navier-Stokes equations	47
Appendix to §5	65
6. An estimate of the resolvent of the linearized Navier-Stokes operator	68
7. Estimates of the leading derivatives of a solution of the linearized steady-state Navier-Stokes equations	91
Chapter II. Stability of fluid motion	99
1. Stability of the motion of infinite-dimensional systems	99
2. Conditions for stability	103
3. Conditions for instability. Conditional stability	115
Chapter III. Stability of periodic motions	121
1. Formulation of the problem	121
2. The problem with initial data	122
3. A condition for asymptotic stability	132
4. A condition for instability	135
5. Conditional stability	138
6. Stability of self-oscillatory regimes	147
7. Instability of cycles	154
8. Damping of the leading derivatives	161
Bibliography	163
