Preface	v
<b>1 Fine Structure</b>	<b>1</b>
1.1 Acceptable $J$ -Structures . . . . .	1
1.2 The $\Sigma_1$ -Projectum . . . . .	6
1.3 Downward Extension of Embeddings Lemmata . . . . .	8
1.4 Upward Extension of Embeddings Lemma . . . . .	12
1.5 Iterated Projecta . . . . .	18
1.6 $\Sigma^*$ -Relations . . . . .	20
1.7 $\Sigma_\ell^{(n)}$ -Embeddings . . . . .	23
1.8 Substitution and Good Functions . . . . .	26
1.9 Standard Parameters . . . . .	33
1.10 Two Applications to $L$ . . . . .	36
1.11 More on Downward Extensions of Embeddings . . . . .	38
1.12 Witnesses and Solidity . . . . .	41
Notes . . . . .	45
<b>2 Extenders and Coherent Structures</b>	<b>47</b>
2.1 Extenders . . . . .	47
2.2 The Hypermeasure Representation of Extenders . . . . .	54
2.3 Amenability . . . . .	56
2.4 Coherent Structures . . . . .	58
2.5 Extendibility . . . . .	61
2.6 Strong Cardinals . . . . .	68
Notes . . . . .	70
<b>3 Fine Ultrapowers</b>	<b>71</b>
3.1 The $*$ -Ultrapower Construction . . . . .	71
3.2 Some Special Preservation Properties . . . . .	82
3.3 When $F$ Is Close to $M$ . . . . .	85
3.4 Extendibility . . . . .	89
3.5 $k$ -Ultrapowers . . . . .	93
3.6 Pseudoultrapowers . . . . .	96
Notes . . . . .	108
<b>4 Mice and Iterability</b>	<b>109</b>
4.1 Premice . . . . .	109
4.2 Iterations . . . . .	114
4.3 Copying and the Dodd–Jensen Lemma . . . . .	119

4.4	Comparison Process . . . . .	127
4.5	Some Iterability Criteria . . . . .	131
4.6	Bicephali . . . . .	142
	Notes . . . . .	145
<b>5</b>	<b>Solidity and Condensation</b>	<b>146</b>
5.1	Cores and Coiterations . . . . .	146
5.2	The Solidity Theorem . . . . .	150
5.3	Consequences of Solidity . . . . .	155
5.4	The Canonical Ordering of Mice . . . . .	160
5.5	Condensation Lemma . . . . .	163
5.6	Upwards Extensions to Premice . . . . .	167
	Notes . . . . .	174
<b>6</b>	<b>Extender Models</b>	<b>175</b>
6.1	Extender Models and Iterations . . . . .	175
6.2	The Canonical Ordering of Weasels . . . . .	178
6.3	Universality . . . . .	183
6.4	The Model $K^c$ . . . . .	186
6.5	$\mathbf{0}^\ddagger$ . . . . .	198
6.6	Weak Covering . . . . .	203
	Notes . . . . .	211
<b>7</b>	<b>The Core Model</b>	<b>212</b>
7.1	Inductive Definition of $K$ . . . . .	212
7.2	Steel's Definition of $K$ . . . . .	214
7.3	The Existence of $K$ . . . . .	218
7.4	Embeddings of $K$ and Generic Absoluteness . . . . .	230
7.5	Weak Covering for $K$ . . . . .	235
	Notes . . . . .	249
<b>8</b>	<b>One Strong Cardinal</b>	<b>251</b>
8.1	Premice . . . . .	251
8.2	Properties of Mice . . . . .	258
8.3	Extender Models up to One Strong Cardinal . . . . .	269
	Notes . . . . .	279
<b>9</b>	<b>Overlapping Extenders</b>	<b>280</b>
9.1	Premice and Iteration Trees . . . . .	281
9.2	Copying and the Dodd–Jensen Property . . . . .	299
9.3	Solidity and Condensation . . . . .	318
9.4	Uniqueness of Well-Founded Branches . . . . .	345
9.5	Towards the Ultimate Model $K^c$ . . . . .	355
	Notes . . . . .	358
