

Contents

	Page
Preface	3
1. Historical development and discrete analysis ...	5
2. Virtual work principles in FEM	9
3. Variational principles in FEM	15
4. Weighted residual formulation in FEM	17
5. Element shape functions (basic functions).....	28
6. Isoparametric elements and numerical integration	30
7. Finite differences and FEM	38
8. Thick shell solution	40
9. Application to two phase (porous) solids	45
10. General treatment of non-linear problems	57
11. Material non-linearity in solid mechanics	62
12. Plasticity formulation	71
13. Viscoplasticity formulation	74
14. Transients - parabolic problems	77
15. Transients - hyperbolic problems	87
References	95
