

A. Borel *et al.*
**Intersection
Cohomology**

1984

Birkhäuser
Boston · Basel · Stuttgart

TABLE OF CONTENTS

I. INTRODUCTION TO PIECEWISE LINEAR INTERSECTION HOMOLOGY

by A. Haefliger

§1. Pseudomanifolds and stratifications	1
§2 Geometric chains on PL space	5
§3 Definition of intersection homology	10
§4 List of the main properties of intersection homology	12
§5 Examples: pseudomanifolds with isolated singularities	14
References	21

II. FROM PL TO SHEAF THEORY

by N. Habegger

§0 Introduction	23
§1 The calculus of chains	24
§2 Intersection homology of a product with Euclidean space	25
§3 Intersection homology of a cone	28
§4 The local intersection homology groups	29
§5 The sheaves IC are soft	32
§6 Axioms for the intersection homology sheaves	33

III. A SAMPLE COMPUTATION OF INTERSECTION HOMOLOGY

by M. Goresky and R. MacPherson

35

IV. PSEUDOMANIFOLD STRUCTURES ON COMPLEX ANALYTIC SPACES

by N. A'Campo

41

References	45
------------------	----

V. SHEAF THEORETIC INTERSECTION COHOMOLOGY

by A. Borel

(with the collaboration of N. Spaltenstein)

§1 Sheaf theory	47
A. Generalities	47
B. Cohomological dimension and bounded resolutions	53

§2	Deligne's sheaf. First axiomatic characterisation	60
§3	Constructibility	68
§4	Reformulation of the axioms and topological invariance of IC.	86
§5	The derived category of sheaves	97
	A. Triangles and long exact sequences	97
	B. Further properties of distinguished triangles	102
	C. The derived category of $\text{Sh}(X)$	108
§6	Flat and c-soft sheaves	113
§7	The dual of a complex of sheaves. Verdier duality	119
	A. The dualizing sheaf and homology	119
	B. The dual of a complex of sheaves	121
	C. The functors $f_!$ and $f'^!$. Verdier duality	127
§8	Biduality on a pseudomanifold	133
	A. Constructibility	133
	B. Biduality	137
§9	Pairings and Poincaré duality in IC	143
	A. Some morphisms	143
	B. Poincaré duality	146
	C. Pairings	151
§10	Some formulae in derived categories of sheaves	155
	A. Continuous maps	155
	B. Stratified maps	163
	C. Some identities on products	170
	References	182

VI. LES FONCTEURS DE LA CATEGORIE DES FAISCEAUX

ASSOCIES A UNE APPLICATION CONTINUE

by P.P. Grivel 183

§1	Les foncteurs f_* et f^*	184
§2	Le foncteur $f_!$	186
§3	Le foncteur $f'^!$	197
	Appendice	204
	Références	207

VII. WITT SPACE COBORDISM THEORY (after P. Siegel)

by M. Goresky 209

References	214
------------------	-----

VIII. LEFSCHETZ FIXED POINT THEOREM AND INTERSECTION HOMOLOGY	
by M. Goresky and R. MacPherson	215
References	219
IX. PROBLEMS AND BIBLIOGRAPHY ON INTERSECTION HOMOLOGY	
by M. Goresky and R. MacPherson	221
References	229
AUTHORS ADDRESSES	235
