Contents

1. Introduction to Linear Algebra	1
1. Some problems which lead to linear algebra	1
2. Number systems and mathematical induction	6
2. Vector Spaces and Systems of Linear Equations	16
3. Vector spaces	16
4. Subspaces and linear dependence	26
5. The concepts of basis and dimension	34
6. Row equivalence of matrices	38
7. Some general theorems about finitely generated vector spaces	48
8. Systems of linear equations	53
9. Systems of homogeneous equations	62
10. Linear manifolds	69
3. Linear Transformations and Matrices	75
11. Linear transformations	75
12. Addition and multiplication of matrices	88
13. Linear transformations and matrices	99
4. Vector Spaces with an Inner Product	109
14. The concept of symmetry	109
15. Inner products	119

5. Determinants	132
16. Definition of determinants	132
17. Existence and uniqueness of determinants	140
18. The multiplication theorem for determinants	146
19. Further properties of determinants	150
6. Polynomials and Complex Numbers	163
20. Polynomials	163
21. Complex numbers	176
7. The Theory of a Single Linear Transformation	184
22. Basic concepts	184
23. Invariant subspaces	193
24. The triangular form theorem	201
25. The rational and Jordan canonical forms	216
8. Dual Vector Spaces and Multilinear Algebra	228
26. Quotient spaces and dual vector spaces	228
27. Bilinear forms and duality	236
28. Direct sums and tensor products	243
29. A proof of the elementary divisor theorem	260
9. Orthogonal and Unitary Transformations	266
30. The structure of orthogonal transformations	266
31. The principal axis theorem	271
32. Unitary transformations and the spectral theorem	278
10. Some Applications of Linear Algebra	289
33. Finite symmetry groups in three dimensions	289
34. Application to differential equations	298
35. Analytic methods in matrix theory	306
36. Sums of squares and Hurwitz's theorem	315
Bibliography (with Notes)	325
Solutions of Selected Exercises	327
Symbols (Including Greek Letters)	342
Index	344
