

Chapter 1 gives the introduction to buckling and the importance of the critical buckling load in design. Chapter 2 presents the flexural buckling solutions for columns under various loading, restraints and boundary conditions. The effect of transverse shear deformation on the buckling load of columns, a brief discussion on the flexural-torsional buckling of columns for thin-walled members with open-profile, and inelastic buckling of columns are presented in Chapter 2. Chapter 3 contains the exact flexural-torsional buckling solutions of beams and the buckling solutions of circular arches and rings. Chapter 4 deals with the buckling of thin and thick plates under inplane loads for various shapes and boundary conditions. Results for inelastic buckling of circular, rectangular and polygonal plates are also presented. Finally, Chapter 5 presents buckling solutions for cylindrical shells, spherical shells and truncated conical shells.

It is hoped that this book will be a useful reference source for benchmark solutions that is so needed in checking the validity, accuracy and convergence of numerical results.

This book contains so many mathematical equations and numbers that it is impossible not to have typographical and other kinds of errors. We wish to thank in advance those readers who are willing to draw attention to typos and errors, using the e-mail addresses: *cvewcm@nus.edu.sg*, *cywang@math.msu.edu*, or *jnreddy@tamu.edu*.

Contents

Preface	ix
1 INTRODUCTION	1
1.1 What Is Buckling?	1
1.2 Importance of Buckling Load	3
1.3 Historical Review	5
1.4 Scope of the Book	6
REFERENCES	7
2 BUCKLING OF COLUMNS	9
2.1 Euler Columns under End Axial Load	9
2.1.1 Governing Equations and Boundary Conditions	9
2.1.2 Columns with Classical Boundary Conditions	11
2.1.3 Columns with Elastic End Restraints	12
2.2 Euler Columns under End Load Dependent on Direction	14
2.3 Euler Columns with an Intermediate Axial Load	16
2.4 Euler Columns with an Intermediate Restraint	21
2.5 Euler Columns with an Internal Hinge	30
2.5.1 Columns with an Internal Hinge	30
2.5.2 Columns with a Rotational Restrained Junction	32
2.6 Euler Columns with a Continuous Elastic Restraint	35
2.7 Euler Columns with Distributed Load	40
2.7.1 Infinite Hanging Heavy Column with Bottom Load	40
2.7.2 Heavy Column with Top Load	42
2.7.3 Two-Segment Heavy Column – General Formulation	44
2.7.4 Heavy Column Partially Submerged in Liquid	47
2.7.5 Standing Two-Segment Heavy Column	49
2.8 Euler Columns with Variable Cross Section	51
2.8.1 Introduction	51
2.8.2 Columns under End Concentrated Load	52
2.8.3 Columns under Distributed Axial Load	57

2.9 Timoshenko Columns	58
2.9.1 Columns under End Axial Load	58
2.9.2 Columns under Intermediate and End Axial Loads ...	64
2.10 Flexural-Torsional Buckling of Columns	67
2.11 Inelastic Buckling of Columns	69
REFERENCES	71
3 BUCKLING OF BEAMS, ARCHES AND RINGS	77
3.1 Flexural-Torsional Buckling of Beams	77
3.1.1 Introduction	77
3.1.2 Beams of Rectangular Cross-Section	77
3.1.3 I-Beams	81
3.2 Inplane Buckling of Rings and Arches	85
3.2.1 Governing Equations	85
3.2.2 Circular Rings under Uniform Pressure	86
3.2.3 Circular Rings with Hinges	87
3.2.4 Circular Rings with Distributed Resistance	89
3.2.5 General Circular Arch	90
3.2.6 Symmetrical Circular Arch	92
3.2.7 Symmetrical Arches with a Central Torsional Hinge ..	95
3.3 Flexural-Torsional Buckling of Arches under Equal End Moments	97
REFERENCES	99
4 BUCKLING OF PLATES	101
4.1 Preliminary Comments	101
4.2 Governing Equations in Rectangular Coordinates	101
4.3 Governing Equations in Polar Coordinates	104
4.4 Circular Plates	108
4.4.1 General Solution for Axisymmetric Buckling	108
4.4.2 Axisymmetric Buckling of Clamped Plates	110
4.4.3 Axisymmetric Buckling of Simply Supported Plates ..	111
4.4.4 Axisymmetric Buckling of Simply Supported Plates with Rotational Restraint	111
4.4.5 General Solution for Nonaxisymmetric Buckling	112
4.4.6 Buckling of Plates with Internal Ring Support	113
4.4.7 Axisymmetric Buckling of Plates under Intermediate and Edge Radial Loads	116
4.4.8 Buckling of Annular Plates under Uniform Compression	120

4.5 Buckling of Rectangular Plates	126
4.5.1 Preliminary Comments	126
4.5.2 Simply Supported Biaxially Loaded Plates	127
4.5.3 Plates Simply Supported along Two Opposite Sides and Compressed in the Direction Perpendicular to These Sides	133
4.5.4 Plates with Abrupt Changes in Geometry or Material Properties	141
4.6 Simply Supported Isosceles Triangular Plates	148
4.7 First-Order Shear Deformation Theory of Plates	150
4.7.1 Governing Equations of Rectangular Plates	150
4.7.2 Buckling Loads of Rectangular Plates	152
4.7.3 Buckling Loads of Circular Plates	154
4.8 Inelastic Buckling of Plates	158
4.8.1 Introduction	158
4.8.2 Governing Equations of Circular Plates	159
4.8.3 Buckling Solutions of Circular Plates	161
4.8.4 Governing Equations of Rectangular Plates	162
4.8.5 Buckling Solutions of Rectangular Plates	167
4.8.6 Buckling of Simply Supported Polygonal Plates	176
REFERENCES	180
5 BUCKLING OF SHELLS	185
5.1 Preliminary Comments	185
5.2 Axisymmetric Buckling of Circular Cylindrical Shells under Uniform Axial Compression	185
5.3 Nonaxisymmetric Buckling of Circular Cylindrical Shells under Uniform Axial Compression	187
5.4 Buckling of Circular Cylindrical Panels under Uniform Axial Compression	194
5.5 Buckling of Circular Cylindrical Shells under Lateral Pressure	195
5.6 Buckling of Spherical Shells under Hydrostatic Pressure ...	198
5.7 Buckling of Truncated Conical Shells under Axial Vertex Load	200
REFERENCES	203
