

To Betty, Martha, Marybeth, Dave, Tom, Jeff, Steven, Brian, Sarah, Scott, Beth, Mike, Carley, Lauren, and Katie for all the time I spent away from them while preparing this third edition.

---

## CONTENTS

---

|  |      |
|--|------|
| Preface                                | xvii |
| <b>Chapter 1 Introduction</b>          | 1    |
| 1-1 Cost of Corrosion                  | 1    |
| 1-2 Corrosion Engineering              | 3    |
| 1-3 Definition of Corrosion            | 4    |
| 1-4 Environments                       | 5    |
| 1-5 Corrosion Damage                   | 5    |
| 1-6 Classification of Corrosion        | 9    |
| 1-7 Future Outlook                     | 9    |
| <b>Chapter 2 Corrosion Principles</b>  | 12   |
| 2-1 Introduction                       | 12   |
| 2-2 Corrosion Rate Expressions         | 13   |
| <b>Electrochemical Aspects</b>         | 14   |
| 2-3 Electrochemical Reactions          | 14   |
| 2-4 Polarization                       | 19   |
| 2-5 Passivity                          | 21   |
| <b>Environmental Effects</b>           | 23   |
| 2-6 Effect of Oxygen and Oxidizers     | 23   |
| 2-7 Effects of Velocity                | 24   |
| 2-8 Effect of Temperature              | 26   |
| 2-9 Effects of Corrosive Concentration | 26   |
| 2-10 Effect of Galvanic Coupling       | 27   |
|  | vii  |

|  |    |
|--|----|
| <b>Metallurgical and Other Aspects</b>       | 28 |
| 2-11 Metallic Properties                     | 28 |
| 2-12 Economic Considerations                 | 32 |
| 2-13 Importance of Inspection                | 36 |
| 2-14 New Instrumentation                     | 38 |
| 2-15 Study Sequence                          | 38 |
| <b>Chapter 3 Eight Forms of Corrosion</b>    | 39 |
| <b>Uniform Attack</b>                        | 39 |
| <b>Galvanic or Two-Metal Corrosion</b>       | 41 |
| 3-1 EMF and Galvanic Series                  | 41 |
| 3-2 Environmental Effects                    | 45 |
| 3-3 Distance Effect                          | 46 |
| 3-4 Area Effect                              | 46 |
| 3-5 Prevention                               | 48 |
| 3-6 Beneficial Applications                  | 50 |
| <b>Crevice Corrosion</b>                     | 51 |
| 3-7 Environmental Factors                    | 51 |
| 3-8 Mechanism                                | 53 |
| 3-9 Combating Crevice Corrosion              | 59 |
| 3-10 Filiform Corrosion                      | 59 |
| <b>Pitting</b>                               | 63 |
| 3-11 Pit Shape and Growth                    | 64 |
| 3-12 Autocatalytic Nature of Pitting         | 66 |
| 3-13 Solution Composition                    | 69 |
| 3-14 Velocity                                | 70 |
| 3-15 Metallurgical Variables                 | 71 |
| 3-16 Evaluation of Pitting Damage            | 72 |
| 3-17 Prevention                              | 73 |
| <b>Intergranular Corrosion</b>               | 73 |
| 3-18 Austenitic Stainless Steels             | 74 |
| 3-19 Weld Decay                              | 76 |
| 3-20 Control for Austenitic Stainless Steels | 78 |
| 3-21 Knife-Line Attack                       | 83 |
| 3-22 Intergranular Corrosion of Other Alloys | 85 |
| <b>Selective Leaching</b>                    | 86 |
| 3-23 Dezincification: Characteristics        | 86 |
| 3-24 Dezincification: Mechanism              | 88 |

|                                    |     |
|------------------------------------|-----|
| 3-25 Dezincification: Prevention   | 88  |
| 3-26 Graphitization                | 89  |
| 3-27 Other Alloy Systems           | 89  |
| 3-28 High Temperatures             | 90  |
| <b>Erosion Corrosion</b>           | 91  |
| 3-29 Surface Films                 | 92  |
| 3-30 Velocity                      | 95  |
| 3-31 Turbulence                    | 97  |
| 3-32 Impingement                   | 98  |
| 3-33 Galvanic Effect               | 100 |
| 3-34 Nature of Metal or Alloy      | 100 |
| 3-35 Combating Erosion Corrosion   | 102 |
| 3-36 Cavitation Damage             | 104 |
| 3-37 Fretting Corrosion            | 105 |
| <b>Stress Corrosion</b>            | 109 |
| 3-38 Crack Morphology              | 112 |
| 3-39 Stress Effects                | 114 |
| 3-40 Time to Cracking              | 116 |
| 3-41 Environmental Factors         | 117 |
| 3-42 Metallurgical Factors         | 123 |
| 3-43 Mechanism                     | 124 |
| 3-44 Multienvironment Charts       | 126 |
| 3-45 Classification of Mechanisms  | 136 |
| 3-46 Methods of Prevention         | 138 |
| 3-47 Corrosion Fatigue             | 139 |
| <b>Hydrogen Damage</b>             | 143 |
| 3-48 Characteristics               | 143 |
| 3-49 Environmental Factors         | 144 |
| 3-50 Hydrogen Blistering           | 144 |
| 3-51 Hydrogen Embrittlement        | 145 |
| 3-52 Prevention                    | 149 |
| 3-53 Fracture Mechanics            | 151 |
| <b>Chapter 4 Corrosion Testing</b> | 153 |
| 4-1 Introduction                   | 153 |
| 4-2 Classification                 | 153 |
| 4-3 Purpose                        | 155 |
| 4-4 Materials and Specimens        | 156 |
| 4-5 Surface Preparation            | 157 |
| 4-6 Measuring and Weighing         | 158 |
| 4-7 Exposure Techniques            | 158 |
| 4-8 Duration                       | 162 |
| 4-9 Planned-Interval Tests         | 164 |

|      |   |     |
|------|---|-----|
| 4-10 | Aeration                                | 165 |
| 4-11 | Cleaning Specimens After Exposure       | 167 |
| 4-12 | Temperature                             | 169 |
| 4-13 | Standard Expressions for Corrosion Rate | 171 |
| 4-14 | Galvanic Corrosion                      | 174 |
| 4-15 | High Temperatures and Pressures         | 174 |
| 4-16 | Erosion Corrosion                       | 176 |
| 4-17 | Crevice Corrosion                       | 181 |
| 4-18 | Intergranular Corrosion                 | 184 |
| 4-19 | Huey Test for Stainless Steels          | 184 |
| 4-20 | Streicher Test for Stainless Steels     | 185 |
| 4-21 | Warren Test                             | 186 |
| 4-22 | Pitting                                 | 186 |
| 4-23 | Stress Corrosion                        | 187 |
| 4-24 | NACE Test Methods                       | 189 |
| 4-25 | Slow-Strain-Rate Tests                  | 191 |
| 4-26 | Linear Polarization                     | 192 |
| 4-27 | AC Impedance                            | 194 |
| 4-28 | Small-Amplitude Cyclic Voltammetry      | 198 |
| 4-29 | Electronic Instrumentation              | 200 |
| 4-30 | In Vivo Corrosion                       | 202 |
| 4-31 | Paint Tests                             | 204 |
| 4-32 | Seawater Tests                          | 206 |
| 4-33 | Miscellaneous Tests of Metals           | 207 |
| 4-34 | Corrosion of Plastics and Elastomers    | 212 |
| 4-35 | Presenting and Summarizing Data         | 215 |
| 4-36 | Nomograph for Corrosion Rates           | 216 |
| 4-37 | Interpretation of Results               | 218 |

**Chapter 5 Materials 219**

|     |                       |     |
|-----|-----------------------|-----|
| 5-1 | Mechanical Properties | 219 |
| 5-2 | Other Properties      | 220 |

**Metals and Alloys 220**

|      |                          |     |
|------|--------------------------|-----|
| 5-3  | Cast Irons               | 220 |
| 5-4  | High-Silicon Cast Irons  | 222 |
| 5-5  | Other Alloy Cast Irons   | 224 |
| 5-6  | Carbon Steels and Irons  | 224 |
| 5-7  | Low-Alloy Steels         | 225 |
| 5-8  | Stainless Steels         | 226 |
| 5-9  | Aluminum and Its Alloys  | 236 |
| 5-10 | Magnesium and Its Alloys | 239 |
| 5-11 | Lead and Its Alloys      | 239 |
| 5-12 | Copper and Its Alloys    | 240 |
| 5-13 | Nickel and Its Alloys    | 243 |
| 5-14 | Zinc and Its Alloys      | 244 |

|      |                         |     |
|------|-------------------------|-----|
| 5-15 | Tin and Tin Plate       | 244 |
| 5-16 | Cadmium                 | 245 |
| 5-17 | Titanium and Its Alloys | 245 |
| 5-18 | Refractory Metals       | 248 |
| 5-19 | Noble Metals            | 251 |
| 5-20 | Metallic Glasses        | 253 |
| 5-21 | Metallic Composites     | 256 |

**Nonmetallics 259**

|      |                               |     |
|------|-------------------------------|-----|
| 5-22 | Natural and Synthetic Rubbers | 259 |
| 5-23 | Other Elastomers              | 263 |
| 5-24 | Plastics                      | 263 |

**Thermoplastics 265**

|      |                                |     |
|------|--------------------------------|-----|
| 5-25 | Fluorocarbons                  | 265 |
| 5-26 | Acrylics                       | 269 |
| 5-27 | Nylon                          | 269 |
| 5-28 | Chlorinated Polyether          | 269 |
| 5-29 | Polyethylenes                  | 269 |
| 5-30 | Polypropylene                  | 270 |
| 5-31 | Polystyrene                    | 270 |
| 5-32 | Rigid Polyvinyl Chloride (PVC) | 270 |
| 5-33 | Vinyls                         | 270 |
| 5-34 | Other Thermoplastics           | 271 |

**Thermosetters 271**

|      |                                   |     |
|------|-----------------------------------|-----|
| 5-35 | Epoxies                           | 271 |
| 5-36 | Phenolics                         | 271 |
| 5-37 | Polyesters                        | 271 |
| 5-38 | Silicones                         | 272 |
| 5-39 | Ureas                             | 272 |
| 5-40 | Laminates and Reinforced Plastics | 272 |

**Other Nonmetallics 274**

|      |                     |     |
|------|---------------------|-----|
| 5-41 | Ceramics            | 274 |
| 5-42 | Carbon and Graphite | 276 |
| 5-43 | Wood                | 277 |

**Chapter 6 Corrosion Prevention 278**

**Materials Selection 278**

|     |                    |     |
|-----|--------------------|-----|
| 6-1 | Metals and Alloys  | 278 |
| 6-2 | Metal Purification | 280 |
| 6-3 | Nonmetallics       | 280 |

|   |     |
|---|-----|
| <b>Alteration of Environment</b>                            | 281 |
| 6-4 Changing Mediums  | 281 |
| 6-5 Inhibitors  | 282 |
| <b>Design</b>   | 292 |
| 6-6 Wall Thickness  | 292 |
| 6-7 Design Rules  | 292 |
| <b>Cathodic and Anodic Protection</b>                       | 294 |
| 6-8 Cathodic Protection                                     | 294 |
| 6-9 Anodic Protection                                       | 300 |
| 6-10 Comparison of Anodic and Cathodic Protection           | 302 |
| <b>Coatings</b>   | 304 |
| 6-11 Metallic and Other Inorganic Coatings                  | 304 |
| 6-12 Organic Coatings                                       | 309 |
| 6-13 Corrosion Control Standards                            | 315 |
| 6-14 Failure Analysis                                       | 315 |
| <b>Chapter 7 Mineral Acids</b>                              | 317 |
| <b>Sulfuric Acid</b>  | 317 |
| 7-1 Steel   | 319 |
| 7-2 Cast Iron   | 320 |
| 7-3 Chemical Lead   | 321 |
| 7-4 High-Silicon Cast Iron                                  | 322 |
| 7-5 Durimet 20  | 323 |
| 7-6 Nickel-Molybdenum and Nickel-Molybdenum-Chromium Alloys | 324 |
| 7-7 Combined Isocorrosion Chart                             | 326 |
| 7-8 Conventional Stainless Steels                           | 327 |
| 7-9 Monel, Nickel, Inconel, and Ni-Resist                   | 327 |
| 7-10 Copper and Its Alloys                                  | 328 |
| 7-11 Other Metals and Alloys                                | 328 |
| 7-12 Summary Chart  | 329 |
| 7-13 Equipment at Ambient Temperatures                      | 334 |
| 7-14 Sulfuric Acid Plant Equipment                          | 334 |
| 7-15 Nonmetallics   | 336 |
| <b>Nitric Acid</b>  | 337 |
| 7-16 Stainless Steels                                       | 337 |
| 7-17 Class 1 Materials                                      | 338 |
| 7-18 Class 2 Materials                                      | 342 |
| 7-19 Class 3 Materials                                      | 345 |
| 7-20 Mixed Acids  | 346 |

|   |     |
|---|-----|
| <b>Hydrochloric Acid</b>                    | 346 |
| 7-21 Class 1 Metals and Alloys              | 347 |
| 7-22 Class 2 Metals and Alloys              | 349 |
| 7-23 Class 3 Metals and Alloys              | 350 |
| 7-24 Aeration and Oxidizing Agents          | 350 |
| 7-25 Nonmetallic Materials                  | 351 |
| 7-26 Hydrogen Chloride and Chlorine         | 352 |
| <b>Hydrofluoric Acid</b>                    | 352 |
| 7-27 Aqueous Hydrofluoric Acid              | 353 |
| 7-28 Anhydrous Hydrofluoric Acid            | 356 |
| 7-29 Fluorine                               | 357 |
| <b>Phosphoric Acid</b>                      | 357 |
| 7-30 Materials of Construction              | 357 |
| 7-31 Miscellaneous                          | 359 |
| <b>Chapter 8 Other Environments</b>         | 360 |
| 8-1 Organic Acids                           | 360 |
| 8-2 Alkalies                                | 369 |
| 8-3 Atmospheric Corrosion                   | 372 |
| 8-4 Seawater                                | 373 |
| 8-5 Fresh Water                             | 378 |
| 8-6 High-Purity Water                       | 381 |
| 8-7 Soils                                   | 383 |
