Notices

Knowledge and best practice in this field are constantly changing. As new research and experience broaden our understanding, changes in research methods, professional practices, or medical treatment may become necessary.

Practitioners and researchers must always rely on their own experience and knowledge in evaluating and using any information, methods, compounds, or experiments described herein. In using such information or methods they should be mindful of their own safety and the safety of others, including parties for whom they have a professional responsibility.

To the fullest extent of the law, neither the Publisher nor the authors, contributors, or editors, assume any liability for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein.

Contents

Preface	xv
Acknowledgements	xvii
1 Design office management and organization	1
Engineering drawing practices	6
Drawing practice and the computer (CAD: computer aided draughting and design)	7
A drawing standard	9
Revisions	10
The replacement of BS 308	10
BS 8888. Technical product documentation and specification	11
2 Product development and computer aided design	13
Computer aided draughting and design	16
Technical product documentation	18
Access into the computer network	20
Quality assurance	21
3 Design for manufacture to end of life	23
4 Intellectual property and engineering design	29
Patents	29
Designs	30
Copyright	32
Trademarks	32
Important points to remember	33
5 CAD organization and applications	35
Computer and software purchase	37
Project development	37
Size of computer	39
Parametric design	39
Sheet metalwork application	41
Pipework systems	42
Communicating design concepts	43
Materials options	45

6 Principles of first and third angle orthographic projection	49
First angle projection	49
Third angle projection	49
Projection symbols	54
Drawing procedure	56
Reading engineering drawings	57
Projection exercises	60
7 Linework and lettering	71
Drawing paper sizes	71
Presentation	72
Types of line and their application	72
Chain lines	74
Coinciding lines	77
Lettering	77
Minimum character height for capital letters and numerals	77
Drawing modifications	79
Care and storage of hard copy original drawings	79
8 Three-dimensional illustrations using isometric and oblique projection	81
Isometric projection	81
Oblique projection	85
9 Drawing layouts and simplified methods	91
Single-part drawing	91
Collective single-part drawings	93
Assembly drawings	94
Collective assembly drawing	95
Design layout drawings	96
Combined detail and assembly drawings	96
Exploded assembly drawings	97
Simplified drawings	98
Machine drawings	100
Drawing scales	103
Scale used in geometric construction	104
Abbreviations	106
10 Sections and sectional views	109
Half sections	111
Revolved sections	111
Removed sections	113
Sections through thin material	114
Local sections	115
Components not drawn in section	115
Successive sections	115
Sections in two parallel planes	115

11 Geometrical constructions and tangency	119
To bisect a given angle AOB	119
To bisect a given straight line AB	120
To bisect a given arc AB	120
To find the center of a given arc AB	121
To inscribe a circle in a given triangle ABC	121
To circumscribe a circle around triangle ABC	121
To draw a hexagon, given the distance across the corners	122
To draw a hexagon, given the distance across the flats	123
To draw a regular octagon, given the distance across corners	123
To draw a regular octagon, given the distance across the flats	124
To draw a regular polygon, given the length of the sides	125
Tangency	
To draw a tangent to a point a on the circumference of a circle, center O	125
To draw a tangent to a circle from any given point a outside the circle	125
To draw an external tangent to two circles	126
To draw an internal tangent to two circles	126
To draw internal and external tangents to two circles of equal diameter	127
To draw a curve of given radius to touch two circles when the circles are outside the radius	127
To draw a curve of given radius to touch two circles when the circles are inside the radius	128
To draw a radius to join a straight line and a given circle	129
To draw a radius which is tangential to given straight lines	129
12 Loci applications	131
Methods of drawing an ellipse	131
The involute	135
Archimedean spiral	136
Right-hand cylindrical helix	138
Right-hand conical helix	140
The cycloid	140
The epicycloid	141
The hypocycloid	141
13 True lengths and auxiliary views	147
14 Conic sections and interpenetration of solids	155
To draw an ellipse from part of a cone	155
To draw a parabola from part of a cone	157
To draw a rectangular hyperbola from part of a cone	160
Interpenetration	

15 Development of patterns from sheet materials	167
16 Dimensioning principles	181
Property indicators	184
Dimensioning curves using arc length, chord length or angular distance	189
Dimensioning of thin parts	200
Dimensioning of developed parts	201
Dimensioning restricted areas	201
Use of the between symbol	202
Dimensioning of edges	203
17 Screw threads and conventional representations	207
Screw threads	207
ISO metric threads	208
Unified threads	211
Threads for power transmission	213
Draughting conventions associated with threads	215
Multiple threads	217
The application of thread conventions	218
Tapping drill	219
Clearance drill	219
18 Nuts, bolts, screws, and washers	221
Drawing nuts and bolts	223
Approximate construction for nuts and bolts	223
Socket head screws manufactured to BS EN ISO 4762 and BS 3643-2	224
ISO metric hexagon socket cap screws	225
ISO metric hexagon socket shoulder screws	225
ISO metric hexagon socket button head screws	225
ISO metric hexagon socket countersunk head screws	227
ISO metric hexagon socket set screws	227
Machine screws	229
Machine screw nuts	231
Wing nuts	237
Locking and retaining devices	238
Slotted nuts and castle nuts	239
Simmonds locknut	239
Spring washers	240
Shakeproof washers	240
Wire locking	241
Tab washers	243
Locking plates	243
Taper pins and parallel pins	243

Split cotter pins	246
Locking by adhesives	247
Peening	248
Thread-cutting screws	248
19 Keys and key ways	251
Sunk keys	252
Woodruff keys	255
Dimensioning keyways (parallel keys)	256
20 Worked examples in machine drawing	259
Bushed bearing bracket	259
Drill table	261
Cam operated clamp	264
Plug cock	264
Air engine	264
Toolbox	268
Solution notes	279
21 Limits and fits	283
Elements of interchangeable systems	284
Unilateral and bilateral limits	285
Bases of fits	286
Selected ISO fits — hole basis (extracted from BS 4500)	289
Interpretations of limits of size in relation to form	293
22 Geometrical tolerancing and datums	293
Geometrical tolerances	293
Applications	293
Advantages	294
General rules	294
Theoretically Exact Dimensions (TEDs)	294
Definitions	298
Method of indicating geometrical tolerances on drawings	298
Methods of applying the tolerance frame to the toleranced feature	300
Procedure for positioning remarks which are related to tolerance	301
The application of tolerances to a restricted length of a feature	302
Tolerance zones	303
Projected toleranced zone	303
Datums and Datum Systems	303
Datums	305
Methods of specifying datum features	306
Datum systems	306

Common datums	307
Datum targets	311
Dimensioning and tolerancing non-rigid parts	312
23 Application of geometrical tolerances	
Straightness	315
Flatness	315
Circularity (roundness)	318
Profile tolerance of a line	319
Parallelism	322
Perpendicularity (squareness)	325
Angularity	329
Circular run-out	333
Total run-out	335
Position	338
Concentricity and coaxiality	339
Symmetry	344
Alternative tolerancing method using geometrical tolerancing in place of general tolerances	346
24 Maximum material and least material requirements	
Maximum material condition (MMC)	351
Least material condition (LMC)	351
Maximum material requirement related to geometrical form	352
Maximum material requirement applied to straightness	353
Maximum material requirement applied to squareness	354
Maximum material requirement applied to position	355
Maximum material requirement applied to coaxiality	356
Maximum material requirement and perfect form	358
The Application of Maximum Material Requirement and its relationship with perfect form and squareness	359
The Application of Maximum Material Requirement and its relationship with perfect form and coaxiality	360
The Application of Maximum Material Requirement to Two Mating Components	362
25 Positional tolerancing	
Theoretically exact dimensioning (TED) (true-position)	365
Typical product requirement	366
26 Surface texture	
Graphical symbols to indicate surface texture	375
Expanded graphical symbols	375
Complete graphical symbols	376

'All surfaces around a workpiece' graphical symbol	377
Composition of complete graphical symbols for surface texture	377
Mandatory positions for complementary requirements	377
27 Surface finish and corrosion of metals	383
Surface finish	383
Corrosion of metals	388
Design considerations to minimize the effects of corrosion	393
28 3D annotation and product data management	395
Axis or median feature	397
Projected tolerance zone	398
Indicating a tolerance zone between two points	399
Unilateral and unequal profile tolerance	400
Indicating the direction of tolerance zones	401
Data management	402
29 The Duality Principle — the essential link between the design intent and the verification of the end product	405
Introduction	405
Design specification and verification	405
Advantages of the Duality Principle	410
30 Differences between American ASME Y 14.5M geometric dimensioning and tolerancing (GD&T) and ISO/BS 8888 geometrical tolerancing standards	411
Applicability of standards	411
Symbolology	416
Specification of datums	416
Exclusion of surface texture	417
Tolerancing principle	417
Features of size	418
31 Cams and gears	421
Cam followers	421
Cam follower motions	422
Case 1	424
Case 2	425
Case 3	426
Case 4	427
Case 5	429
Case 6	430
Dimensioning cams	431

	Contents
Spur gears	432
Spur-gear terms	433
Involute gear teeth proportions and relationships	434
Typical example using professor Unwin's approximate construction	438
Helical gears	437
Bevel gears	439
Worm gearing	443
32 Springs	
Plain-carbon steels	445
Alloy steels	445
Stainless steels	445
High-nickel alloys	446
Copper-base alloys	446
Compression springs	446
Flat springs	446
Torsion springs	449
Leaf springs	451
Helical extension springs	452
Disc springs	452
Spring specifications	455
Wire forms	455
Corrosion prevention	460
Fatigue conditions	460
33 Welding and welding symbols	
The indication and application of welding symbols on drawings	461
Dimensioning of welds	462
	468
34 Engineering diagrams	
General engineering graphical symbols	471
Engineered systems	471
Heating, ventilation and air conditioning systems	472
Refrigeration systems and energy-saving applications	476
Pneumatic systems	489
Pneumatics and electronics	495
	507
35 Bearings and applied technology	
Plain bearings	519
Ball and roller bearings	519
	526
36 Engineering adhesives	
Designing for adhesives	547
The bond line	547
Typical bonded joints	548
	549

Contents	
Engineering applications	553
Instant adhesives	557
Structural applications	559
	561
37 Related standards	
The British Standards institution	561
BSI knowledge center	562
Technical information group	562
Foreign standards and translations	562
PLUS — private list updating service	562
Perinorm	563
DISC	563
British Standards Online and CD-ROM	563
The Standards-making process	563
International Organization for Standardization (ISO)	564
	575
38 Production drawings	
Further standards for design, project and risk management of interest to engineers and manufacturers	583
	585
39 Design for additive manufacture	
General design considerations	585
AM processes	586
Design/build recommendations	587
Materials	588
Suitability for AM	589
Related standards	589
	595
40 Drawing solutions	
	605
