part 1 BASIC THEORY	
Chapter 1. Mechanical and Thermodynamical Foundations	3
1.1 Introduction	3
1.2 Notation	4
1.3 Deformation; Small-Strain Tensor	6
1.4 Equations of Motion	7
1.5 Thermodynamics; Basic Definitions	9
1.6 Thermodynamics of Uniform Systems	10
1.7 Transition to Nonuniform Systems	15
1.8 Conservation of Energy in Nonuniform Systems	17
1.9 Preliminaries to the Second Law of Thermodynamics for Continua	19
1.10 Carathéodory's Statement of the Second Law of Thermodynamics and Its Consequences	23
1.11 Irreversible Thermodynamics; Entropy Production	25
1.12 Stress-Strain Relations and Energy Equation for an Isotropic Elastic Solid	27
1.13 Stress-Strain Relations and Energy Equation for an Isotropic Linear Viscoelastic Solid	32
1.14 Summary of Linear Coupled Thermoelastic Theory; Uniqueness Theorem	37
Chapter 2. Uncoupled Quasi-Static Thermoelastic Theory	41
2.1 Introduction	41

2.2	General Remarks on the Effects of Coupling and Inertia	42
2.3	Solution of a Coupled Thermoelastic Problem	44
2.4	Discussion of Article 2.3	49
2.5	Effect of Inertia	54
2.6	Uncoupled Quasi-Static Formulation	60
2.7	Uniqueness Theorems for the Uncoupled, Quasi-Static Thermoelastic Theory	62
Appendix	Thermoelastic Damping	70
Chapter 3. Alternate Formulations of Thermoelastic Problems 75		
3.1	Introduction	75
3.2	Displacement Formulation	76
3.3	Body-Force Analogy	77
3.4	Reduction of the Thermoelastic Problem to One at Constant Temperature with No Body Forces; Goodier's Method	78
3.5	Use of Boussinesq-Papkovich Functions	83
3.6	Stress Formulation	84
3.7	Necessity of Compatibility Equations	90
3.8	Stress-Formulation for Multiply Connected Bodies	92
3.9	Temperature Distributions Which Result in Zero Stress	95
3.10	Dislocations	97
Chapter 4. Two-Dimensional Thermoelastic Formulations 101		
4.1	Introduction	101
4.2	Plane-Strain Thermoelastic Problems	103
4.3	Boundary Conditions on the End Faces for the Case of Plane Strain	105
4.4	Stress Formulation of Plane-Strain Problems	107
4.5	Stress Formulation in Terms of a Stress Function	109
4.6	Plane-Stress Thermoelastic Problems	116
4.7	Discussion of the Plane-Stress Solution	122
4.8	Plane Stress as a Limiting Case of a Three-Dimensional State of Stress for Thin Slices	125
4.9	Steady-State Temperature Distributions	129
4.10	Dislocation Analogy	131
part 2 HEAT CONDUCTION		
Chapter 5. The Formulation of Heat Transfer Problems 135		
5.1	Introduction	135
5.2	Modes of Heat Transfer	136
5.3	The Fourier Heat Conduction Equation	138

5.4	Initial and Boundary Conditions	143
5.5	Dimensionless Parameters	145
5.6	Discussion of the Boundary Conditions	146
5.7	Uniqueness Theorem	157
5.8	One-Dimensional Formulations for Thin Sections	160
Chapter 6. Some Basic Problems in Heat Conduction 164		
6.1	Introduction	164
6.2	Sources and Sinks in an Infinite Solid	164
6.3	A More General Solution of Eq. 6.2.3b	168
6.4	The Semi-Infinite Solid under Time-Dependent Boundary Conditions	171
6.5	Solutions Obtained by Superposition and Imaging of Sources and Sinks	173
6.6	Alternative Forms of Series Solutions; Poisson's Formula	178
6.7	Temperatures Due to Sources Regarded as Fundamental Solutions (Green's Functions)	179
6.8	Saint-Venant's Principle in Heat Conduction Problems	183
6.9	Upper and Lower Bounds on the Temperature	188
6.10	Over-All Heat Balance; the Melting Slab	190
Chapter 7. Methods of Solution of Heat Conduction Problems 195		
7.1	Introduction	195
7.2	Separation of Variables (Method of Characteristic Functions)	196
7.3	Laplace Transforms	208
7.4	Conformal Mapping	214
7.5	Numerical Methods	220
7.6	Electrical Analogy	222
7.7	Approximate Analytical Procedures	224
7.8	Some Techniques for Extending Previous Solutions	231
part 3 THERMAL STRESS ANALYSIS FOR ELASTIC SYSTEMS		
Chapter 8. Summary of the Formulation of Thermoelastic Problems 243		
8.1	Introduction	243
8.2	Thermoelastic Stress-Strain Relations	244
8.3	Equations of Equilibrium	246
8.4	Strain-Displacement Relations	248
8.5	Boundary Conditions	249

8.6	Mathematical Formulation of the Problem of Thermoelasticity	250
8.7	Principal Stresses and Strains	251
8.8	Separation of Stresses Due to Temperature and to External Loads	254
8.9	Alternative Formulations of the Problem of Thermoelasticity	255
8.10	Two-Dimensional Formulations	258
8.11	Energy Methods	262
8.12	Methods of Solution of Thermoelastic Problems	269
Chapter 9. Some Basic Problems in Thermoelasticity		272
9.1	Introduction	272
9.2	Three-Dimensional Problems in Which the Stresses Are Zero	272
9.3	Three-Dimensional Problems in Which the Displacements Are Zero	274
9.4	Two-Dimensional Problems in Which the Stresses in the Plane Are Zero	275
9.5	Free Plate with Temperature Variation through the Thickness Only	277
9.6	Rectangular Beam with Temperature Variation through the Depth Only	279
9.7	Discussion of Articles 9.5 and 9.6	281
9.8	Example for Articles 9.5 and 9.6	283
9.9	Slowly Heated Beam or Plate	287
9.10	Circular Disc or Cylinder with Radial Temperature Variation	288
9.11	Circular Disc or Cylinder with Plane-Harmonic Temperature Distribution	292
9.12	Additional References on Thermal Stresses in Cylinders	298
9.13	Circular Rectangular Beam with Radial Temperature Variation	299
9.14	Solid or Hollow Sphere under Radial Temperature Variation	300
9.15	Over-All Thermoelastic Deformations	304
Chapter 10. Thermal Stresses in Beams		307
10.1	Introduction	307
10.2	Elementary Formulas for Normal Thermal Stresses in Free Beams	307
10.3	Thermal Deflections of Beams	311
10.4	Beam End-Conditions; Statically Indeterminate Beams	314

10.5	Thermal Shear Stresses in Thin-Walled Beams	317
10.6	Exact Two-Dimensional Thermoelastic Solution for Rectangular Beams under Arbitrary Temperature Distributions	320
10.7	Discussion of Article 10.6; Relation to Strength-of-Materials Theory	325
10.8	Exact Theory for Free Beams of Arbitrary Simply-Connected Cross Section with Linear Spanwise Temperature Distributions	328
10.9	Discussion of Article 10.8; Relation to Strength-of-Materials Theory	332
10.10	Use of Dummy Loads for the Calculation of Beam Deflections	335
10.11	Thermally Induced Vibrations of Beams	339
Appendix The End-Problem in Beams; Saint-Venant's Principle		345
Chapter 11. Thermal Stresses in Curved Beams, Rings, Trusses, Frames, and Built-up Structures		356
11.1	Introduction	356
11.2	Strength-of-Materials Theory for Thermal Stresses in Curved Beams	356
11.3	Discussion of Article 11.2; Relation to Exact and to Straight-Beam Analyses	359
11.4	Thermal Stresses in Rings	363
11.5	Thermal Stresses in Statically Determinate Trusses	369
11.6	Thermal Stresses in Statically Indeterminate Trusses	369
11.7	Thermal Stresses in Rigid Frames	371
11.8	Use of Influence Coefficients	372
11.9	References on the Analysis of Reinforced Sheet Structures	376
Chapter 12. Thermal Stresses in Plates		379
12.1	Introduction	379
12.2	Basic Plate Equations	379
12.3	Plate Boundary Conditions	384
12.4	Solutions of Thermoelastic Plate Problems	389
12.5	Plates with Temperature Distributions Varying through the Thickness Only	400
12.6	Relation of Thin-Plate Theory to Exact Thermoelastic Solutions	405
12.7	Thermally Induced Vibrations of Plates	406

Chapter 13. Thermoelastic Stability and Related Problems	410
13.1 Introduction	410
13.2 Heated Beam-Columns with Ends Axially Unrestrained	411
13.3 Heated Beam-Columns with Ends Axially Restrained	415
13.4 Heated Beams under Axial Loads: General Theory	418
13.5 Discussion of Article 13.4	425
13.6 Bending and Buckling of Bimetallic Beams	429
13.7 Thermal Buckling of Plates	432
13.8 Buckling of Plates Subjected to Heat and No Transverse Loads with Edges Unrestrained in the Plane	434
13.9 Buckling of Plates Subjected to Heat and Loads in the Plane; Edges Unrestrained in the Plane	435
13.10 Plates with Their Edges Restrained in the Plane	441
13.11 Large Deflections and Post-Buckling Behavior of Plates	445

part 4 THERMAL STRESS ANALYSIS FOR INELASTIC SYSTEMS

Chapter 14. The Formulation of Inelastic Thermal Stress Problems	453
14.1 Introduction	453
14.2 Stress Relaxation and Creep	455
14.3 Plastic Flow and Work-Hardening	456
14.4 Idealized Theories and Materials	457
14.5 Viscoelastic Stress-Strain Relations	459
14.6 Idealized Plasticity Theory: Work-Hardening Solid	466
14.7 Idealized Plasticity Theory: Perfectly Plastic Solid	473
14.8 Uniqueness Theorem for Perfectly Plastic Solid	475
14.9 The Mises Yield Condition	478
14.10 The Tresca Yield Condition	481
14.11 Combined Viscoelastic and Plastic Effects	487
Chapter 15. Viscoelastic Stress Analysis	490
15.1 Introduction	490
15.2 Viscoelastic-Elastic Analogy	490
15.3 Discussion of the Viscoelastic-Elastic Analogy	494
15.4 Example for the Viscoelastic-Elastic Analogy	496
15.5 Linear Viscoelastic Strength-of-Materials Theory	499
15.6 Initial Conditions for a Linear Viscoelastic Solid	502
15.7 Nonlinear Viscoelastic Analyses	508
15.8 Nonlinear Viscoelastic Strength-of-Materials Theory; Creep Rupture in Tension	510

15.9 Creep Buckling	512
15.10 Further Investigations of Creep Buckling	515
Chapter 16. Plastic Stress Analysis	524
16.1 Introduction	524
16.2 Elastoplastic Free Plate Analysis	525
16.3 Two Examples of Elastoplastic Plate Analysis	532
16.4 Free Plate Analysis, Including a Temperature-Dependent Yield Condition and Viscoelastic Effects	543
16.5 Elastoplastic Cylinder Analysis—Tresca Condition	548
16.6 Elastoplastic Cylinder Analysis—Mises Condition	562
