CONTENTS

1. MATHEMATICAL MODELS AND ENGINEERING DECISIONS 1

1.1 Computer-Aided Engineering Decisions 1
1.2 The Problem of Scaling 5
1.3 The Importance of Accuracy and Reliability 6
1.4 On the Importance of Understanding the Model and its Solution 7
1.5 References 9

2. GENERALIZED SOLUTIONS BASED ON THE PRINCIPLE OF VIRTUAL WORK 10

2.1 The Problem of Linear Elastostatics in One Dimension 10
2.2 The Principle of Virtual Work 12
2.3 Uniqueness of the Generalized Solution 21
2.4 The Principle of Minimum Potential Energy 22
2.5 The Problem of Linear Elastodynamics in One Dimension 26
2.6 Eigenvalue Problems 28
2.7 Nonlinear Problems 31
2.8 References 31

3. FINITE ELEMENT DISCRETIZATIONS IN ONE DIMENSION 32

3.1 The Finite Element Space $S^p(\Omega, \Delta, \mathbf{Q})$ in One Dimension 37
3.2 Computation of Stiffness Matrices, Mass Matrices and Load Vectors 41
3.3 Numerical Integration 53
3.4 References 56

4. EXTENSIONS AND THEIR CONVERGENCE RATES IN ONE DIMENSION 57

4.1 Rates of Convergence in Energy Norm 59
4.2 A Posteriori Estimation of Error in Energy Norm 69
4.3 References 71

5. TWO-DIMENSIONAL LINEAR ELASTOSTATIC PROBLEMS 72

5.1 The Equations of Linear Elasticity in Two Dimensions 72
5.2 The Principle of Virtual Work 76
5.3 The Finite Element Solution 81
5.4 The Material Stiffness Matrix $[E]$ 86
5.5 Formulation in Cylindrical Coordinates 90
5.6 References 93

6. ELEMENT-LEVEL BASIS FUNCTIONS IN TWO DIMENSIONS 95

6.1 Shape Functions for Quadrilaterals 96
6.2 Shape Functions for Triangles 102
6.3 Mapping Functions 105
6.4 Integration Procedures 112
6.5 References 116

7. COMPUTATION OF STIFFNESS MATRICES AND LOAD VECTORS FOR TWO DIMENSIONAL ELASTOSTATIC PROBLEMS 118

7.1 Computation of Element Stiffness Matrices 120
7.2 Computation of Element Load Vectors 124
7.3 Additional Examples and Exercises 127
7.4 References 132

8. POTENTIAL FLOW PROBLEMS 133

8.1 The Problem of Heat Conduction in Cartesian Coordinates 133
8.2 The Problem of Heat Conduction in Cylindrical Coordinates 144
8.3 Electrostatics 148

9. ASSEMBLY, CONSTRAINT ENFORCEMENT, AND SOLUTION 150

9.1 Gaussian Elimination 151
9.2 Iterative Methods 157
9.3 Computation of Eigenvalues and Eigenvectors 163
9.4 Note on Roundoff Errors 166
9.5 References 167

10. EXTENSIONS AND THEIR CONVERGENCE RATES IN TWO DIMENSIONS 169

10.1 The Exact Solution in Neighborhoods of Singular Points. Characterization of Smoothness 169
10.2 Rates of Convergence in Energy Norm 180
10.3 Examples 183
10.4 References 193

11. COMPUTATION OF DISPLACEMENTS, STRESSES AND STRESS RESULTANTS 194

11.1 On the Goals of Computation 194
11.2 Post-Solution Operations 195
11.3 Direct Computation of Displacements 201
11.4 Computation of Strains and Stresses 202
11.5 Direct Computation of Stress Resultants 215
11.6 References 217

12. COMPUTATION OF THE COEFFICIENTS OF ASYMPTOTIC EXPANSIONS 219

12.1 The Laplace Equation 219
12.2 The Equations of Elasticity 223
12.3 Examples 229
12.4 References 234

13. THREE-DIMENSIONAL LINEAR ELASTOSTATIC PROBLEMS 235

13.1 The Equations of Linear Elasticity in Three Dimensions 235
13.2 The Principle of Virtual Work 238
13.3 Finite Elements in Three Dimensions 239
13.3 References 245

14. MODELS FOR PLATES AND SHELLS 246

14.1 Classical Plate Models 247
14.2 Analysis of Classical Plate Models 257
14.3 The Boundary Layer 263
14.4 The Transverse Variation of Displacements 267
14.5 Hierarchic Plate and Shell Models 270
14.6 References 275

15. MISCELLANEOUS TOPICS 276

15.1 The Principle of Minimum Complementary Energy 276
15.2 Other Finite Element Methods 279
15.3 Notes on Nonlinear Problems 283
15.4 References 289

16. ESTIMATION AND CONTROL OF ERRORS OF DISCRETIZATION 290

16.1 The Use of a Priori Information 290
16.2 A Posteriori Error Estimators and Error Indicators 294
16.3 Adaptive and Feedback Approaches 299
16.4 References 313

17. MATHEMATICAL MODELS 316

17.1 Models for Fastened Connections 318
17.2 Spherical Shell with Stiffening Ring 327
17.3 Models for Structural Plates and Shells 333
17.4 Comments on the Computation of Engineering Data with Reasonable Guarantees of Reliability 342
17.5 Closing Remarks 349
17.6 References 350

A. APPENDIX A 352

A.1 Normed Linear Spaces, Linear Functionals and Bilinear Forms 352
A.2 Convergence in the Space X 353
A.3 The Schwarz Inequality for Integrals 354
A.4 Legendre Polynomials 354

B. APPENDIX B: BIBLIOGRAPHY 358

B.1 The Finite Element Method 358
B.2 Selected References on Variational Methods and Functional Analysis 362

INDEX 363
