

Hal R. Varian

Editor

Economic and Financial Modeling with Mathematica®

Includes diskette

Springer Science+Business Media, LLC

Hal R. Varian
Department of Economics
University of Michigan
Ann Arbor, MI 48109-1220
USA

Published by TELOS, The Electronic Library of Science, Santa Clara, CA.

Publisher: Allan M. Wylde
Publishing Coordinator: Cindy Peterson
Production Editor: Karen Phillips
Compositor: Glenn Scholebo
Electronic Production Advisor: Karen Phillips
Cover Designer: A Good Thing
Promotions Manager: Paul Manning
Manufacturing Supervisor: Vincent Scelta

Library of Congress Cataloging-in-Publication Data
Varian, Hal R.

Economic and financial modeling with mathematica / Hal R. Varian.
p. cm.
Includes bibliographical references.

1. Econometric models--Computer progress. 2. Finance--Computer
programs. 3. Mathematica (Computer file). I. Title.

Contents

Preface	v
Contributors	xvii
1 Symbolic Optimization	1
<i>Hal R. Varian</i>	
1.1 Notation	1
1.2 Unconstrained Optimization	3
1.3 Constrained Optimization	10
1.4 Graphics	16
1.5 Integrability	17
1.6 Symbolic Dynamic Programming	20
1.7 Numeric Dynamic Programming	24
1.8 Summary	25
1.9 References	25
2 Designing an Incentive-Compatible Contract	26
<i>Todd Kaplan and Arijit Mukherji</i>	
2.1 Description of the Problem and a Summary of the Theory	26
2.2 Preferences: the Single-Crossing Property	27
2.3 Incentive Compatible Contracts with Finitely Many Types	30
2.4 A Comprehensive Illustration of the Finite Case	39
2.5 Approximating the Continuous Problem through Interpolation	43
2.6 Continuous Screening Problems	45
2.7 Non-linear Pricing with Two Types of Consumers	50
2.8 References	57

3	Economic Dynamics	58
	<i>John C. Eckalbar</i>	
3.1	Systems with One Dynamic Variable	59
3.2	Systems with Two Dynamic Variables	63
3.3	Three Dimensional Systems	73
3.4	Lyapunov Functions	75
3.5	Catastrophe	76
3.6	Conclusion	78
3.7	References	78
4	Perturbation Solution Methods for Economic Growth Models	80
	<i>Kenneth L. Judd and Sy-Ming Guu</i>	
4.1	Introduction	80
4.2	Approximations	81
4.3	Optimal Growth Models	82
4.4	Continuous-Time Stochastic Growth	93
4.5	Discrete-Time Growth	98
4.6	Extensions and Conclusions	102
4.7	References	103
5	General Equilibrium Models	104
	<i>Asahi Noguchi</i>	
5.1	The Basic Model	104
5.2	Solving the Model	106
5.3	Presenting the Graph	109
5.4	Program Extensions	115
5.5	Acknowledgment	123
5.6	References	123
6	Symbolic Algebra Programming for Analyzing the Long Run Dynamics of Economic Models	124
	<i>Gary S. Anderson</i>	
6.1	Introduction	124
6.2	Numerical Routines vs Symbolic Routines	125
6.3	Complicated Dynamics are Potentially Present in Traditional Economic Models	130
6.4	Nonlinear Dynamic Economic Model Specification	131
6.5	A General Methodology for Analyzing the Asymptotic Properties of Nonlinear Dynamic Economic Models	133
6.6	Numerical Implementation	138
6.7	Symbolic Implementation	139

6.8	The Analytic Implementation of the Anderson-Moore Saddle Point Analysis Routine Applied to the Example Nonlinear Models	139
6.9	Symbolic Algebra Programming Facilitates a Deeper Analysis of an Overlapping Generations Model	142
6.10	References	146
7	A Program for Finding Nash Equilibria	148
	<i>John Dickhaut and Todd Kaplan</i>	
7.1	Introduction	148
7.2	Examples	152
7.3	Sessions	154
7.4	Performance	164
7.5	Conclusion	166
7.6	References	166
8	Cooperative Games	167
	<i>Michael Carter</i>	
8.1	Modelling Cooperative Games	167
8.2	Some Examples	169
8.3	Imputations and Solutions	171
8.4	The Core	175
8.5	The Nucleolus	180
8.6	The Shapley Value	185
8.7	Conclusion	189
8.8	References	191
9	Mathematica and Diffusions	192
	<i>J. Michael Steele and Robert A. Stine</i>	
9.1	Introduction	192
9.2	Review of Diffusions and Itô's Formula	193
9.3	Basic Mathematica Operations	195
9.4	Deriving the Black-Scholes Formula	200
9.5	More Mathematica Details and Examples	207
9.6	Summary and Concluding Remarks	211
9.7	References	213
10	Itovsn3: Doing Stochastic Calculus with Mathematica	214
	<i>Wilfrid S. Kendall</i>	
10.1	Introduction	214
10.2	Basic Implementation of Itovsn3	220

10.3	Documentation for Itovsn3	224
10.4	Application to a Hedging Problem	234
10.5	Conclusion	237
10.6	References	237
11	Bounded & Unbounded Stochastic Processes	239
	<i>Colin Rose</i>	
11.1	Overview	239
11.2	The Normal Distribution	240
11.3	Exchange Rate Target Zones	246
11.4	Irreversible Investment Under Uncertainty	253
11.5	Simulating Random Processes	256
11.6	References	265
11.7	Acknowledgments	265
12	Option Valuation	266
	<i>Ross M. Miller</i>	
12.1	Introduction	266
12.2	The Black-Scholes Model	267
12.3	Risk Management Using the Black-Scholes Model	272
12.4	Options as Objects	277
12.5	Valuing Options with Financial Decision Trees	280
12.6	Concluding Remarks	285
12.7	References	285
13	Nonlinear Systems Estimation: Asset Pricing Model Application	286
	<i>Stephen J. Brown</i>	
13.1	Introduction	286
13.2	Nonlinear Systems Estimation	286
13.3	Equity Asset Pricing Models	289
13.4	Summary	298
13.5	References	299
14	Econometrics.m: A Package for Doing Econometrics in Mathematica	300
	<i>David A. Belsley</i>	
14.1	Introduction	300
14.2	User's Guide	302
14.3	Examples	317
14.4	Development Notes	335
14.5	Related Experimental Packages	339
14.6	References	343

15	Bayesian Econometrics: Conjugate Analysis and Rejection Sampling	344
	<i>Eduardo Ley and Mark F.J. Steel</i>	
15.1	Introduction	344
15.2	Conjugate Analysis	345
15.3	A Rejection Sampling Approach to Demand Analysis	354
15.4	Concluding Remarks	365
15.5	Appendix	366
15.6	References	367
16	Time Series Models and Mathematica	368
	<i>Robert A. Stine</i>	
16.1	Introduction	368
16.2	Interactive Manipulations	370
16.3	Using the Arima Package	377
16.4	Numerical Methods and Estimation	394
16.5	Discussion	405
16.6	References	406
17	Decision Analytica: An Example of Bayesian Inference and Decision Theory Using Mathematica	407
	<i>Robert J. Korsan</i>	
17.1	Summary	407
17.2	A Touch of History	408
17.3	An Overview of Decision Analysis	409
17.4	The Mathematica Packages—InfluenceDiagram.m and JohnsonDistributions.m	413
17.5	Influence Diagrams	413
17.6	The Wildcatter's Problem, A Prototypical Decision Problem	423
17.7	A Full Decision Analysis	430
17.8	What Hath Mathematica Wrought?	453
17.9	Acknowledgment	454
17.10	Appendix I: DecisionAnalytica`InfluenceDiagram`	454
17.11	Appendix II: DecisionAnalytica`JohnsonDistributions`	456
17.12	References	457
