Contents

Preface	v
Selected Notation	xvii
1 Introduction	1
1.1 About This Book	4
1.1.1 Controlling Error	8
1.1.2 Strategies For Reading This Book	9
1.1.3 Intended Audience	9
1.2 Available Software	9
1.2.1 Unix Machines	10
1.2.2 IBM Compatible Personal Computers	11
1.3 What This Book Does Not Contain	11
1.4 Conventions	11
References	12
2 Estimating Volume and Count	13
2.1 Volume	15
2.2 Error and Sample Size Considerations	19
2.3 Confidence Intervals	27
2.4 Exploiting Regional Bounds	34
2.4.1 Bounds on Volume	35
2.4.2 Worst-Case and Best-Case Sample Sizes	36
2.4.3 Worst-Case Normal Error	40

2.4.4 Hyperrectangular Bounds	40
2.4.5 Modifying the Sampling Distribution	42
2.5 Relative Error	51
2.5.1 Exponential Sample Size	55
2.6 Network Reliability	55
2.7 Multivariable Integration	64
2.7.1 Quadrature Formulas	65
2.7.2 Equidistributed Points	65
2.7.3 Monte Carlo Sampling	66
2.8 Exploiting Function Bounds	70
2.9 Exploiting Parameter Bounds	72
2.10 Restricting the Sampling Region	75
2.11 Reducing the Sampling Dimension	77
2.12 Counting Problems	78
2.13 Sensitivity Analysis	82
2.13.1 Worst-Case and Best-Case Sample Sizes for Absolute Error	87
2.13.1.a Worst Case	87
2.13.1.b Best Case	93
2.13.2 Example	95
2.13.3 Worst-Case and Best-Case Sample Sizes for Relative Error	100
2.13.4 Example	103
2.14 Simultaneous Confidence Intervals	103
2.15 Ratio Estimation	108
2.16 Sequential Estimation	117
2.16.1 Absolute Error	118
2.16.2 Relative Error	120
2.16.3 Mixed Error Criteria	121
Appendix	122
Exercises	127
References	143
3 Generating Samples	145
3.1 Independence and Dependence	147
3.2 Inverse Transform Method	149
3.2.1 Continuous Distributions	150
3.2.2 Restricted Sampling	152
3.2.3 Preserving Monotonicity	152
3.2.4 Discrete Distributions	153
3.2.4.1 Accumulated Roundoff Error	155
3.3 Cutpoint Method	156
3.3.1 Restricted Sampling	158
3.3.2 The Case of Large $b - a$	158
3.4 Composition Method	160
3.5 Alias Method	165
3.5.1 One or Two Uniform Deviates	167
3.5.2 Setting Up the Tables	167
3.5.3 Comparing the Cutpoint and Alias Methods	169

3.6	Acceptance–Rejection Method	171
	Example 3.1	172
3.6.1	Squeeze Method	174
	Example 3.2	177
3.6.2	Avoiding Logarithmic Evaluations	177
3.6.3	Theory and Practice	178
3.7	Ratio-of-Uniforms Method	179
	Example 3.3	182
3.8	Exact–Approximation Method	185
3.9	Algorithms for Selected Distributions	187
3.10	Exponential Distribution	188
3.11	Normal Distribution	189
3.12	Lognormal Distribution	192
3.13	Cauchy Distribution	192
3.14	Gamma Distribution	193
	$\alpha \leq 1$	194
	$\alpha > 1$	195
3.15	Beta Distribution	200
	$\max(\alpha, \beta) < 1$	201
	$\min(\alpha, \beta) > 1$	203
	$\min(\alpha, \beta) < 1$ and $\max(\alpha, \beta) > 1$	205
3.16	Student's t Distribution	207
3.17	Snedecor's F Distribution	208
3.18	Revisiting the Ratio-of-Uniforms Method	209
3.19	Poisson Distribution	211
3.20	Binomial Distribution	215
3.21	Hypergeometric Distribution	218
3.22	Geometric Distribution	221
3.23	Negative Binomial Distribution	222
3.24	Multivariate Normal Distribution	223
3.25	Multinomial Distribution	224
3.26	Order Statistics	226
	3.26.1 Generating the Smallest or Largest Order Statistics	229
3.27	Sampling Without Replacement and Permutations	230
	3.27.1 Generating k Out of n with Unequal Weights	231
3.28	Points in and on a Simplex	232
	3.28.1 Points in $\mathcal{S}_n(b) \setminus \mathcal{S}_n(a)$ for $b \geq a > 0$	233
	3.28.2 Convex Polytopes	233
3.29	Points in and on a Hyperellipsoid	234
3.30	Bernoulli Trials	235
3.31	Sampling from a Changing Probability Table	236
3.32	Random Spanning Trees	241
	Exercises	242
	References	251
4	Increasing Efficiency	255
4.1	Importance Sampling	257
	4.1.1 Converting Unboundedness to Boundedness	259

4.1.2	Revisiting the Union Counting Problem	261
4.1.3	Exponential Change of Measure	265
4.1.4	Random Summations with Random Stopping Times	269
4.1.5	$M/M/1$ Exceedance Probability	274
4.1.6	Sequential Probability Ratio Test	275
4.2	Control Variates	277
4.2.1	Normal Control Variates	281
4.2.2	Binary Control Variates and Stochastic Ordering	285
4.2.3	Estimating the Distribution of Maximal Flow	291
4.3	Stratified Sampling	296
4.3.1	Sample Size Considerations	303
4.3.2	Estimating a Distributional Constant	304
4.3.3	Confidence Intervals	308
4.3.4	Poststratified Sampling	309
4.4	Inducing Correlation	311
4.4.1	Estimation in One Dimension	314
4.4.2	Estimation in Multiple Dimensions with $n = 2$ Replications	315
4.4.3	Penalty for Misuse	318
4.4.4	More Than Two Replications	319
4.5	Conditonal Monte Carlo	321
	Exercises	325
	References	332
5	Random Tours	335
5.1	Markov Processes	338
5.2	Random Walk	343
5.2.1	Random Walk on a Lattice	345
5.2.2	Normal Increments and Brownian Motion	346
5.3	Markov Time	347
5.4	Score Processes	347
5.5	Neutron Transport	347
5.6	Buffer Exceedance on a Production Line	353
5.7	Fredholm Equations of the Second Kind	358
5.8	Catastrophic Failure	363
5.9	First Passage Time	368
5.10	Random Stopping Time	371
5.11	Generating Random Points from a Target Distribution	376
5.12	Generating a Uniformly Distributed Point on a Finite Set	378
5.13	Generating All Coordinates in a Bounded Region on Each Step	380
5.13.1	Uniform Generation in a Convex Polytope	384
5.14	Metropolis Method	384
5.14.1	Continuous Case	388
5.15	Sampling Coordinates One at a Time	388
5.15.1	Randomly Selected Coordinates	389
5.15.1.1	Contingency Tables	392
5.15.2	Selecting Coordinates in a Fixed Order	394
5.16	Markov Random Fields	396

5.16.1 Gibbs Distribution	398
5.16.2 Ising Model	400
5.17 Gibbs Sampling	402
5.18 Simulated Annealing	403
5.19 Bayesian Posterior Distributions	406
5.19.1 Gamma Conjugate Distributions	409
5.20 Edge Effects	411
5.21 Time to Stationarity	413
5.22 Spectral Structure	415
5.22.1 Nonreversible Markov Chains	417
5.23 Bounds on Error	418
5.24 Varying Initial Conditions	423
5.25 Random Walk on a Hypercube	424
5.26 Conductance	425
5.26.1 Shifted Processes	429
5.27 More About a Random Walk on a Hypercube	430
5.28 An Alternative Error Bound for Stationarity	431
5.29 Sampling from a Hyperrectangular Grid	433
5.30 Sampling from a Hyperrectangle	435
5.31 Product Estimator	437
5.31.1 Optimal Assignment	439
5.31.2 Markov Chain Sampling	440
5.32 Estimating the Volume of a Convex Body	442
5.33 Estimating the Permanent	452
5.34 Coupling	459
5.35 Strong Markov Time	464
5.36 Strong Stationary Dual Process	467
5.36.1 Random Walk on the Integers	468
5.36.2 Another Walk on a Hypercube	470
5.37 Thresholds	472
Exercises	475
References	488
 6 Designing and Analyzing Sample Paths	 493
6.1 Problem Context	495
6.1.1 Single Replication	496
6.1.2 Multiple Replications	499
6.2 A First Approach to Computing Confidence Intervals	500
6.3 Warm-Up Analysis	505
6.3.1 Starting Each Replication in the Same State	505
6.3.2 Estimating Path Length	510
6.3.3 Choosing n_0 and t_0	511
6.3.4 Stratifying the Assignments of Initial States	513
6.3.5 Randomly Assigning Initial States	514
6.4 Choosing a “Good” Initial State or a “Good” π_0	515
6.5 Strictly Stationary Stochastic Processes	520
6.6 Optimal Choice of Sample Path Length t and Number of Replications n ..	525

6.6.1	More General Correlation Structures	529
6.6.2	Negative α	530
6.7	Estimating Required Sample Path Length	531
6.8	Characterizing Convergence	532
6.8.1	I.I.D. Sequences	533
6.8.2	ϕ -Mixing Sequences	534
6.8.3	Strongly Mixing Sequences	534
6.9	An Alternative View of $\text{var } \bar{X}_t$	535
6.10	Batch Means Method	540
6.10.1	Constant Number of Batches	544
6.10.2	Increasing Number of Batches	545
6.10.3	FNB and SQRT Rules	546
6.10.3.1	Interim Review	547
6.10.4	Comparing the FNB and SQRT Rules	549
6.10.5	LBATCH and ABATCH Rules	554
6.10.5.1	LBATCH Rule	554
6.10.5.2	ABATCH Rule	560
6.10.6	Test for Correlation	562
6.10.7	Comparing the FNB, SQRT, LBATCH, and ABATCH Rules	563
6.11	Batch Means Analysis Programs	565
6.11.1	p-Value	570
6.11.2	Prebatching	571
6.11.3	A Comparison with the Multiple Replication Approach	572
6.12	Regenerative Processes	572
6.12.1	Chain Splitting	575
6.13	Selecting an Optimal Acceptance Scheme for Metropolis Sampling	578
	Exercises	580
	References	585
7	Generating Pseudorandom Numbers	587
7.1	Linear Recurrence Generators	589
7.2	Prime Modulus Generators	592
7.2.1	Choosing a Prime Modulus	593
7.2.2	Finding Primitive Roots	593
7.2.3	Sparseness and Nonuniformity	595
7.2.4	Computational Efficiency	597
7.3	Generators with $M = 2^\beta$ ($\beta \geq 3$)	598
7.3.1	Two's Complement	600
7.3.2	Dangerous Multipliers	600
7.4	Mixed Congruential Generators	601
7.5	Implementation and Portability	602
7.6	Apparent Randomness	607
7.6.1	Theory and Practice	609
7.7	Spectral Test	611
7.8	Minimal Number of Parallel Hyperplanes	617
7.9	Distance Between Points	620
7.10	Discrepancy	621

7.11 Beyer Quotient	627
7.12 Empirical Assessments	628
7.12.1 Testing Hypothesis j	629
7.12.2 Testing for Independence: H_0	629
7.12.3 Testing for One-dimensional Uniformity: H_1	630
7.12.4 Testing for Bivariate Uniformity: H_2	631
7.12.5 Testing for Trivariate Uniformity: H_3	632
7.12.6 An Omnibus Test: H_4	632
7.13 Combining Linear Congruential Generators	634
7.13.1 Majorization	634
7.13.2 Shuffling	637
7.13.3 Summing Pseudorandom Numbers	638
7.14 j -Step Linear Recurrence	645
7.15 Feedback Shift Register Generators	649
7.15.1 Distributional Properties	655
7.16 Generalized Feedback Shift Register Generators	658
7.16.1 Initializing a GFSR Sequence	661
7.16.2 Distributional Properties	667
7.17 Nonlinear Generators	670
7.17.1 Quadratic Generators	672
7.17.2 Inversive Generators	672
