INTRODUCTION		
CHAPTER 1.	THE REGULARIZATION METHOD	1
Section 1.	The Basic Problem for Linear Operators	1
Section 2.	The Approximation of the Solution of the Basic Problem	7
Section 3.	The Euler Variation Inequality. Estimation of Accuracy	11
Section 4.	Stability of Regularized Solutions	16
Section 5.	Approximation of the Admissible Set. Choice of the Basis	23
CHAPTER 2.	CRITERIA FOR SELECTION OF REGULARIZATION PARAMETER	32
Section 6.	Some Properties of Regularized Solutions	32
Section 7.	Methods for Choosing the Parameter: Case of Exact Information	40
Section 8.	The Residual Method and the Method of Quasi-solutions: Case of Exact Information	44
Section 9.	Properties of the Auxiliary Functions	47
Section 10.	Criteria for the Choice of a Parameter: Case of Inexact Data	53
CHAPTER 3.	REGULAR METHODS FOR SOLVING LINEAR AND NONLINEAR ILL-POSED PROBLEMS	65
Section 11.	Regularity of Approximation Methods	65
Section 12.	The Theory of Accuracy of Regular Methods	70
Section 13.	The Computation of the Estimation Function	76
Section 14.	Examples of Regular Methods	88
Section 15.	The Principle of Residual Optimality for Approximate Solutions of Equations with Nonlinear Operators	98
Section 16.	The Regularization Method for Nonlinear Equations	108
CHAPTER 4.	THE PROBLEM OF COMPUTATION AND THE GENERAL THEORY OF SPLINES	123
Section 17.	The Problem of Computation and the Parameter Identification Problem	123
Section 18.	Properties of Smoothing Families of Operators	132
Section 19.	The Optimality of Smoothing Algorithms	137
Section 20.	The Differentiation Problem and Algorithms of Approximation of the Experimental Data	142
Section 21.	The Theory of Splines and the Problem of Stable Computation of Values of an Unbounded Operator	159

Page

CHAPTER 4. (cont.)

Section 22. Approximate Solution of Operator Equations Using Splines 178
Section 23. Recovering the Solution of the Basic Problem From Approximate Values of the Functionals 185

CHAPTER 5. REGULAR METHODS FOR SPECIAL CASES OF THE BASIC PROBLEM. ALGORITHMS FOR CHOOSING THE REGULARIZATION PARAMETER 200

Section 24. Pseudosolutions 200
Section 25. Optimal Regularization 214
Section 26. Numerical Algorithms for Regularization Parameters 226
Section 27. Heuristic Methods for Choosing a Parameter 238
Section 28. The Investigation of Adequacy of Mathematical Models 241
